The Sovereign Covenant State

ALETHEIA

Constitution · Languages · Territory · Government · Citizens
Money · Payments · Infrastructure · Security · Funding · Roadmap

Veritas in Foedere · Truth in Covenant

Prepared for the Founding Council · Kortana Labs · 29 September 2026

ABOUT THIS DOCUMENT

A nation described completely enough to build

This blueprint describes the Sovereign Covenant State of Aletheia end to end: what it believes, where it is, how it is governed, who belongs to it, how its money works, how it is built, how it is kept safe and how every part of it is paid for from the Aletheia StableChain economy.

It expands the three-page Master Blueprint (Edition 2026.1) into a working document for founders, engineers, lawyers, planners, investors and future citizens. It is written to agree with the **Aletheia StableChain Master Engineering Specification v2.4**. Where the two earlier documents disagreed, this edition follows the engineering specification and records the change in Appendix C, so nothing is lost silently.

How to read it

- **Part I** sets out the Covenant, the constitution, the symbols and the values the rest of the book serves.
- **Part II** draws the territory: the hexagonal island, its five territories, postal sectors, cities and sea.
- **Part III** covers government, law, dispute resolution and the Unified Security Force.
- **Part IV** covers citizenship, residency, identity, rights and public services.
- **Part V** is the financial operating system: ALUSD, ALnT, the StableChain, the Aletheia Payment Network, and the national funding model that pays for everything else.
- **Part VI** covers physical infrastructure. **Part VII** is the roadmap, risks and appendices, including the **Passport Design Brief** (Appendix D).

> **Status of this document**
>
> Aletheia is a founding project. The maps are a **schematic territorial plan** on a planning grid measured in kilometres from Covenant Square; they will be fitted to a real site once one is secured by purchase, lease, concession or agreement with a host state. All money figures are **planning estimates** in US dollars and are re-set each budget year. Nothing here is an offer of securities, a legal opinion or financial advice.

The republic at a glance

1,778 km²	5	95	4	180,000
Planned land area incl. three islets	Territories: Federal District + 4 states	Hexagonal postal sectors	Official languages: English, German, Serbian, Italian	Resident target by 2040
~1.5 s	1 : 1	0	$11.5 B	EN
Target payment finality (p50)	ALUSD backed by attested reserves	Cash notes or coins in circulation	Build programme 2026–2041	English is the working language

PART I

The Covenant

Why Aletheia exists, the promises it makes, and the symbols that carry them.

CHAPTER 1

Constitutional Intent

Aletheia is a Greek word for truth — literally, that which is not hidden. The republic takes the word as its working method: public records that anyone can verify, money whose backing can be proven, and a government whose every payment leaves a receipt.

The Sovereign Covenant State of Aletheia is designed as a compact, high-efficiency maritime republic. Its founding idea is simple: most of the friction in public life — queues, lost files, delayed payments, disputed records, unaccountable spending — comes from systems that cannot prove what they say. Aletheia builds its state on a deterministic, auditable ledger so that proof is the default, not the exception.

1.1 The founding promises

Promise	What it means in practice	How it is enforced
Truth in records	Land, residence, identity status and public accounts are recorded once and provable.	Native registries on the StableChain with Merkle proofs against finalized blocks.
Honest money	ALUSD is redeemable 1:1 and is never printed to pay for government.	Supply invariants I1–I12 checked after every block; the node halts rather than diverge.
Open accounts	Every public payment is a finalized transaction with a public receipt.	Treasury accounts on-chain; the Auditor-General publishes proofs each epoch.
Lean government	Nine ministries, one security force, no duplicated agencies.	Constitutional cap on ministries; sunset review of every agency every 8 years.
Dignity of the person	Rights of conscience, speech, property, due process and privacy.	Charter of Rights (Chapter 13); no personal data on-chain; courts above code.
Faith and freedom	A Christian founding heritage with full freedom of conscience for all.	Article 4 of the Covenant; equal admission standards for every applicant.

1.2 Design principles of the state

The same priorities that govern the StableChain's engineering govern the state itself. When two goals conflict, the higher one wins:

Rank	Principle	Meaning for the republic
1	Determinism	The same facts produce the same decision, every time, for everyone.
2	Safety	Citizens and their property come first; the state fails safe, never silently.
3	Security	Least privilege, separation of duties, M-of-N control of every critical key.
4	Auditability	Every privileged act is logged, attributable and reviewable.
5	Upgradeability	Laws and protocols change by public, timelocked procedure.

Rank	Principle	Meaning for the republic
6	Operational simplicity	Fewer agencies, fewer forms, one digital front door.
7	Performance	Fast service — but never at the cost of the six above.

A note on scale

Aletheia is deliberately small: about 1,780 km² and 180,000 residents at completion — comparable to a compact island state. Small scale is a design choice. It keeps every public service within reach, lets the whole economy settle on one ledger, and makes the state's accounts readable by an ordinary citizen.

CHAPTER 2

The Covenant — Constitutional Outline

The Covenant is the supreme law. It is short by design: fifteen articles that a citizen can read in one sitting, with detailed rules left to Acts of the Assembly and, for the ledger, to the Aletheia Protocol Standards.

Article	Title	Substance
1	The State	Aletheia is a sovereign, democratic, maritime republic; its territory is the Federal District and the four states.
2	Supremacy	The Covenant is supreme law. Acts, regulations and protocol rules that conflict with it are void.
3	Truth and Record	Public records are kept on the national ledger; the state may not keep secret registers of citizens.
4	Faith and Conscience	The republic honours its Christian founding heritage and guarantees freedom of conscience. No religious law has legal force in Aletheia; the Boundaries of the Republic (12.3) bind every faith.
5	Languages	English, German, Serbian and Italian are the official languages; English is the working language of the state and the authoritative text of the law.
6	Rights	The Charter of Rights (Schedule 1) binds every organ of the state, including automated systems.
7	Citizenship	Acquired by birth to a citizen, or by covenant oath after lawful residence; never removed to leave a person stateless.
8	The Assembly	61 members, elected every four years by proportional representation; makes law and approves budgets.
9	The Chancellor	Head of government, elected by the Assembly; at most two five-year terms.
10	The Courts	An independent High Court of the Covenant; every automated decision can be appealed to a human judge.
11	Money	ALUSD and ALnT are the national monetary instruments; no issuance without reserves and authorization.
12	Security	One Unified Security Force under civilian command, bound by the Charter.
13	The States	Each state has a Governor and State Council with powers listed in Schedule 2.
14	Emergency	Limited to 30 days, renewable only by two-thirds of the Assembly; rights in Schedule 1 Part A never suspended.
15	Amendment	Two-thirds of the Assembly, then a referendum; Articles 3–6 also need a 12-month cooling period.

2.1 Protocol law and the Covenant

Aletheia is the first state whose money and registries run on a protocol it specifies itself. The Covenant draws a clear line between the two kinds of rule:

- **Law** (the Covenant and Acts) decides what must be true: who may mint, who may register land, what a citizen may appeal.
- **Protocol** (the Aletheia Protocol Standards, APS) decides how the ledger enforces it, bit for bit, on every validator.
- A protocol change that alters rights or money requires an Act of the Assembly first, then a governance proposal with the timelock in APS-0026 (at least 8 epochs for protocol upgrades, 4 for monetary capacity).
- The protocol records control references, not legal titles: the Land Registry proves who controls a parcel on the ledger; the courts decide legal ownership when it is disputed.

CHAPTER 3

National Symbols, Passport and Languages

Aletheia's symbols are few and plain, and it speaks four official languages: English, German, Serbian and Italian. The symbols encode the structure of the state; the languages carry its law and its daily life.

3.1 National identity at a glance

Symbol	Description
Name	The Sovereign Covenant State of Aletheia (short form: Aletheia). Demonym: Aletheian.
Motto	Veritas in Foedere — Truth in Covenant (see 3.6 for all official languages).
Official languages	English (working language), German, Serbian and Italian (3.5).
Coat of arms	Quartered shield of the four states with the hexagon and cross at its centre, crested by the star of truth (3.2).
Flag	Option A: white cross fimbriated in gold on navy with the star of truth (3.3).
Colours	Covenant Navy #15294A · Ledger Parchment #F4EEDF · Seal Gold #C49A4E · Laurel Green #2F6B4F.
Typeface	Manrope, used alone in every state publication, interface and sign.
National anthem	Song of the Covenant — to be commissioned by open competition in the founding year.
Founding Day	The day the Covenant is ratified; the StableChain genesis block is timed to the same day.
Calendar	Gregorian civil calendar. The ledger counts time in 500 ms slots and 512-slot epochs from genesis.
Public holidays	New Year · Easter (Friday to Monday) · Founding Day · Day of the States · Harvest Thanksgiving · Christmas and St. Stephen's Day.

3.2 The coat of arms

Figure 3.1 — The coat of arms of the Sovereign Covenant State of Aletheia.

Element	Meaning
Crest · eight-pointed star of truth	Aletheia — truth unhidden; its rays stand for a public, provable record.
Shield · gold-and-parchment cross	The Christian founding heritage, dividing the shield into the four states.
I · Tower (navy)	St. Barbara State — defence, aerospace and secure infrastructure.
II · Open book and flaming heart	Augustine State — learning, faith, medicine and family life.
III · Wheat under a rising sun	Benedict State — energy, farming and work.
IV · Ship with a cross on its sail (navy)	St. Brendan State — ports, voyage and trade.
Centre · hexagon with cross	The Federal District and the hexagonal territory at the heart of the republic.
Laurel with gold berries	Honour, peace and the reward of labour.
Ribbon	The motto Veritas in Foedere — Truth in Covenant.

> **Use of the arms**
>
> The full-colour arms appear on the Covenant, Acts, court judgments and state buildings. The single-colour gold-foil version appears on the passport, residence cards and official seals. Unauthorised commercial use is prohibited by law.

3.3 The national flag

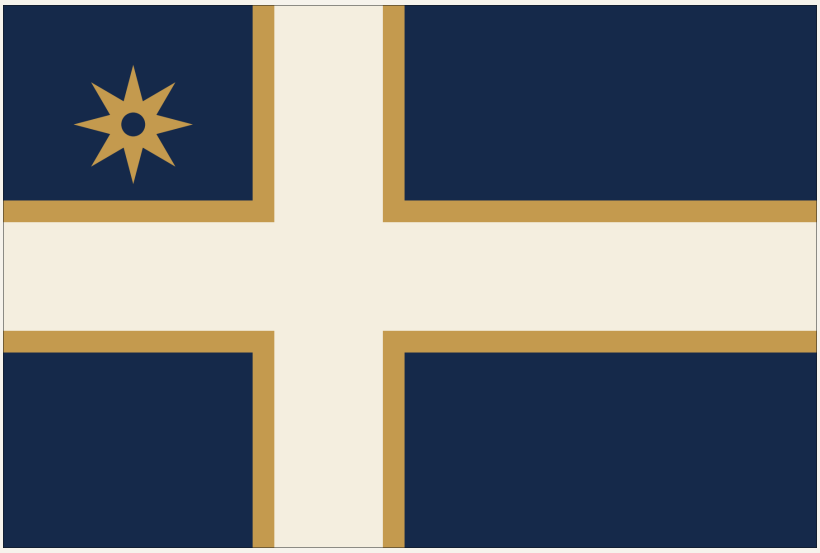

Figure 3.2 — Option A, recommended national flag: a white cross fimbriated in gold on Covenant Navy, with the gold eight-pointed star of truth in the upper hoist. Proportion 3 : 2.

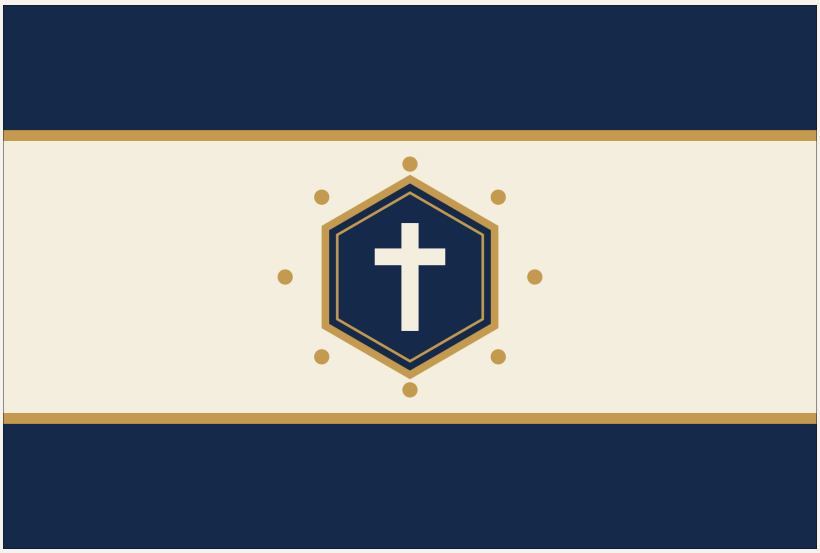

Figure 3.3 — Option B, proposed state and civil ensign: navy, parchment and navy bands edged in gold, with the gold hexagon and cross at the centre ringed by eight gold points. Proportion 3 : 2.

Colour	Hex	Approx. CMYK	Used for
Covenant Navy	#15294A	100 · 80 · 35 · 45	Field of the flag; the sea
Ledger Parchment	#F4EEDF	3 · 5 · 13 · 0	The cross (Option A) and central band (Option B)
Seal Gold	#C49A4E	20 · 38 · 80 · 5	Fimbriation, star of truth, hexagon

The Founding Council adopts one design as the national flag; the other may serve as the state and civil ensign flown at sea and on government buildings.

3.4 The passport

Figure 3.4 — Passport cover: Covenant Burgundy with the gold-foil arms; “Passport” in English with Reisepass, Pasoš and Passaporto beneath; the chip symbol marks an electronic passport.

The Aletheian passport is an electronic machine-readable passport built to ICAO Doc 9303. The full specification of the cover, the data page, the security features and the chip is set out in **Appendix D — Passport Design Brief**, written to be handed to the designer and the licensed security printer.

Item	Summary
Cover colour	Covenant Burgundy #701824 with gold-foil coat of arms.
Format	ICAO TD3 booklet, 125 × 88 mm; 32 pages (standard) or 48 pages (frequent traveller).
Validity	10 years for adults; 5 years for children under 16.
Eligibility	Citizens only, after the covenant oath. Residents receive a residence card.
Languages	English, German, Serbian (Latin script) and Italian on every label.
Chip	Contactless eMRTD chip; the holder's status (valid, lost, revoked) is checkable against the Identity Registry on the StableChain — no personal data on-chain.
Producer	An accredited security printer under contract to the Ministry of Foreign Affairs & Justice.

3.5 Official languages

Aletheia has four official languages. **English** is the working language of the state: the Assembly debates in it, the courts sit in it, and the English text of the Covenant, every Act and every Aletheia Protocol Standard is authoritative. **German**, **Serbian** and **Italian** are official languages with full standing: every person may deal with any public body in any of the four, and receives an answer in the same language.

Language	Status	Scripts	Where it is used
English	Official · working language	Latin	Assembly, courts, legislation, treasury, StableChain and APS standards, APN messaging, Unified Security Force command, school teaching
German	Official	Latin	All public services; Acts and regulations; wallets, the Explorer and state apps; engineering and industry
Serbian	Official	Cyrillic and Latin	All public services; Acts and regulations; wallets, the Explorer and state apps; both scripts accepted in every form and record
Italian	Official	Latin	All public services; Acts and regulations; wallets, the Explorer and state apps; trade, medicine and culture

What the four languages mean in practice

- **Laws.** Every Act is published in all four languages on the day it is promulgated. If versions differ, the English text decides.
- **Public services.** Forms, the digital front door, wallets, the Aletheia Explorer and ALX account statements are available in English, German, Serbian and Italian.
- **Courts.** Proceedings run in English; interpretation into German, Serbian or Italian is free for any party or witness.
- **Identity documents.** Passports and residence credentials carry field names in all four languages; Serbian names may be recorded in Cyrillic and Latin.
- **Signs.** Street and public signs are in English with the local state's second language chosen by its State Council.
- **The ledger.** Protocol identifiers (AL:, AL:T, AL:B, ALX) are language-neutral; error messages and compiler diagnostics are written in plain English first and translated.

3.6 The motto in the official languages

Language	Motto
Latin (original)	Veritas in Foedere
English	Truth in Covenant
German	Wahrheit im Bund
Serbian (Latin)	Istina u Savezu
Serbian (Cyrillic)	Истина у Савезу
Italian	Verità nell'Alleanza

3.7 Learning further languages

Aletheians are expected to grow in languages over their lives. The **National Language Institute** in Antioch runs free courses for residents and citizens, and the republic adds new languages to its programme as trade, diplomacy and settlement require. The programme gives priority to the languages of Aletheia's partner banks, trading routes and treaty partners — for example French, Spanish, Portuguese, Greek and Mandarin — and to Latin for classics, law and liturgy. Arabic is not part of the state language programme and is not an official language.

> **Official languages and private life**
>
> The official-language rules govern the state: its laws, courts, schools and services. In private life, worship, business and the home, every person may speak, read and write any language they choose — that freedom is part of the Charter of Rights.

PART II

The Territory

A hexagonal island of 1,780 km², five territories, 95 postal sectors and a sovereign sea.

CHAPTER 4

Geography and Territorial Configuration

Aletheia is planned as a single main island with three islets, organised on a hexagonal grid. The grid is not decoration: every hexagon is one postal sector, and every territory is a set of whole hexagons.

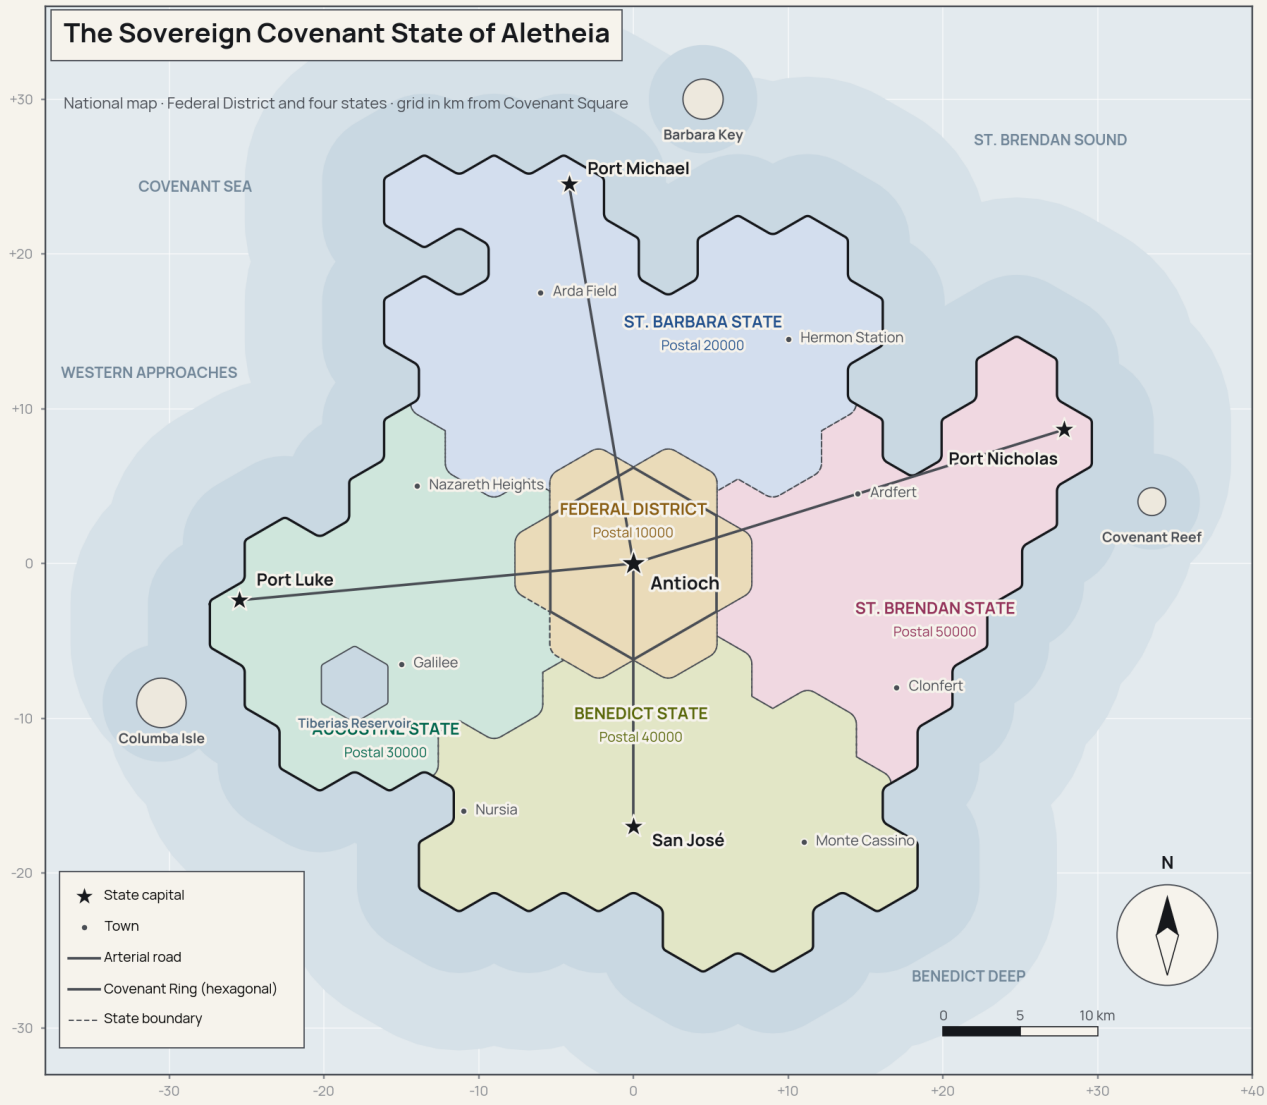

Figure 4.1 — National map. Grid in kilometres east and north of Covenant Square, Antioch. Schematic plan, to be fitted to the secured site.

4.1 The five territories

Territory	Capital	Postal range	Sectors	Area (km²)	Residents 2040	Mandate
Federal District	Antioch	10100–10700	7	167	45,000	Government, Treasury, APN, courts
St. Barbara State	Port Michael	20100–22500	25	481	18,000	Defence, aerospace, secure infrastructure
Augustine State	Port Luke	30100–31800	18	328	60,000	Civic life, homes, education, medicine
Benedict State	San José	40100–42400	24	435	22,000	Energy, utilities, industry, farming
St. Brendan State	Port Nicholas	50100–52100	21	350	35,000	Deep-water ports, logistics, trade
Aletheia	**Antioch**	10100–52100	**95**	**1,762**	**180,000**	Plus islets: 16 km²

4.2 Physical geography

The planning island measures about 57 km east to west and 53 km north to south. Its outline follows the hexagonal grid, with four bays cutting between the states: the Northern Bay between St. Barbara and St. Brendan, Galilee Bay in the west, and two smaller inlets in the south. The grid leaves one enclosed cell unbuilt in Augustine State; it becomes **Tiberias Reservoir**, the island's freshwater store and a public park.

Feature	Location	Role
Covenant Sea	North-west	Sheltered water for Port Michael and naval training.
St. Brendan Sound	North-east	Deep water approach to Port Nicholas; anchorage for large vessels.
Benedict Deep	South-east	Cold deep water: cooling intake for SMR Stations and aquaculture.
Western Approaches	West	Passenger ferries and yachts to Port Luke.
Barbara Key	4 km off the north coast	Radar, naval station and search-and-rescue base.
Covenant Reef	5 km east of Port Nicholas	Navigation light, marine reserve.
Columba Isle	5 km west of Augustine	Coast-guard post, retreat centre, bird sanctuary.
Tiberias Reservoir	Augustine State, sector 30000 area	Freshwater storage (about 20 million m³ planned) and park.

4.3 Site criteria

The territory is described on a planning grid so the design can be fitted to whichever site the republic secures. A site must meet these criteria, scored during the Territory Programme (Chapter 23):

- Land area of 1,200–2,500 km², or an island group that can be linked into one planning grid.
- Deep water within 3 km of shore for at least one port (15 m or more at berth).
- Low seismic and volcanic risk on the zones reserved for SMR stations.
- A clear legal path: purchase with a host-state agreement, a long concession (99 years or more), or recognised sovereignty. Aletheia does not settle land without a lawful title.
- Fibre and shipping reach: a subsea cable system within 200 km and a shipping lane within 100 km.
- No displacement of existing inhabitants without free, prior and informed agreement and fair compensation.

CHAPTER 5

The States and Their Capitals

Each territory has one job it does better than anywhere else on the island. The Federal District governs; the four states build, heal, feed, defend and trade.

5.1 Federal District — capital Antioch

The Federal District is the seven central hexagons around Covenant Square. It holds the Covenant Assembly, the Chancellery, the High Court, the National Treasury, the Aletheia Monetary Authority and the operations centre of the Aletheia Payment Network. Its capital, Antioch, is planned as a hexagonal city with six avenues and four rings (Chapter 6).

- Government quarter with every constitutional body within 1.6 km of Covenant Square.
- Ledger Hall: the StableChain network operations centre, public viewing gallery and archive.
- Financial district for licensed banks, payment service providers and FX providers.
- University of Antioch, National Library and Archive, Cathedral of St. Peter and St. Paul.
- Sovereign Data Centre A, one of four geographically separated data centres.

Postal range	Sectors	Area	Residents 2040	Density 2040
10100–10700	7	167 km²	45,000	269 per km²

5.2 St. Barbara State — capital Port Michael

St. Barbara, named for the patron of engineers and artillery, is the largest and least populated state. It holds the Unified Security Force Joint Headquarters, aerospace engineering and a high-security isolation zone. Most of its land is open country, forest and test ranges.

- Port Michael: naval harbour, shipyard and aerospace park.
- Arda Field air station and runway (3,000 m) for security and emergency aviation.
- High-security isolation zone for defence engineering and HSM key ceremonies.
- Hermon Station: mountain radar, weather station and communications relay.
- Barbara Key radar and naval station offshore.

Postal range	Sectors	Area	Residents 2040	Density 2040
20100–22500	25	481 km²	18,000	37 per km²

5.3 Augustine State — capital Port Luke

Augustine State is where most Aletheians live, learn and are cared for. It is planned as a string of walkable towns around Galilee Bay, with the national hospital and medical research campus at Port Luke, the capital.

- Port Luke: St. Luke National Hospital (400 beds), medical school and biotech research park.
- Nazareth Heights and Galilee: residential towns, schools and parish centres.
- Tiberias Reservoir park and freshwater store.
- Western ferry terminal for passenger traffic.
- Sovereign Data Centre D (Nazareth).

Postal range	Sectors	Area	Residents 2040	Density 2040
30100–31800	18	328 km²	60,000	183 per km²

5.4 Benedict State — capital San José

Benedict State, named for the patron of Europe and of work and prayer, keeps the island running: power, water, food and manufacturing. Its capital San José sits inland at the hub of the high-voltage grid.

- SMR Station Benedict I and II: small modular reactors cooled from Benedict Deep.
- Solar microgrid fields and battery storage.
- Vertical farming campuses at Nursia and Monte Cassino; aquaculture on the south shore.
- Light-industry park, recycling and water treatment.
- Sovereign Data Centre B (Nursia).

Postal range	Sectors	Area	Residents 2040	Density 2040
40100–42400	24	435 km²	22,000	51 per km²

5.5 St. Brendan State — capital Port Nicholas

St. Brendan, named for the navigator saint, faces the shipping lanes. Port Nicholas is the island's gateway for goods, fuel and international trade, and the landing point of the main subsea cable.

- Port Nicholas: six deep-water berths at completion, container terminal and free-trade zone.
- Antioch International Airport (east of the Federal District boundary).
- Naval Base St. Nicholas: coast guard and maritime patrol.
- Ardfert logistics park and Clonfert marine services.
- Sovereign Data Centre C (Ardfert) and subsea cable landing station East-1.

Postal range	Sectors	Area	Residents 2040	Density 2040
50100–52100	21	350 km²	35,000	100 per km²

CHAPTER 6

Antioch — The Capital City

Antioch is planned as a hexagon inside the central hexagon: six avenues radiate from Covenant Square, and four rings separate government, civic life, homes and a green belt.

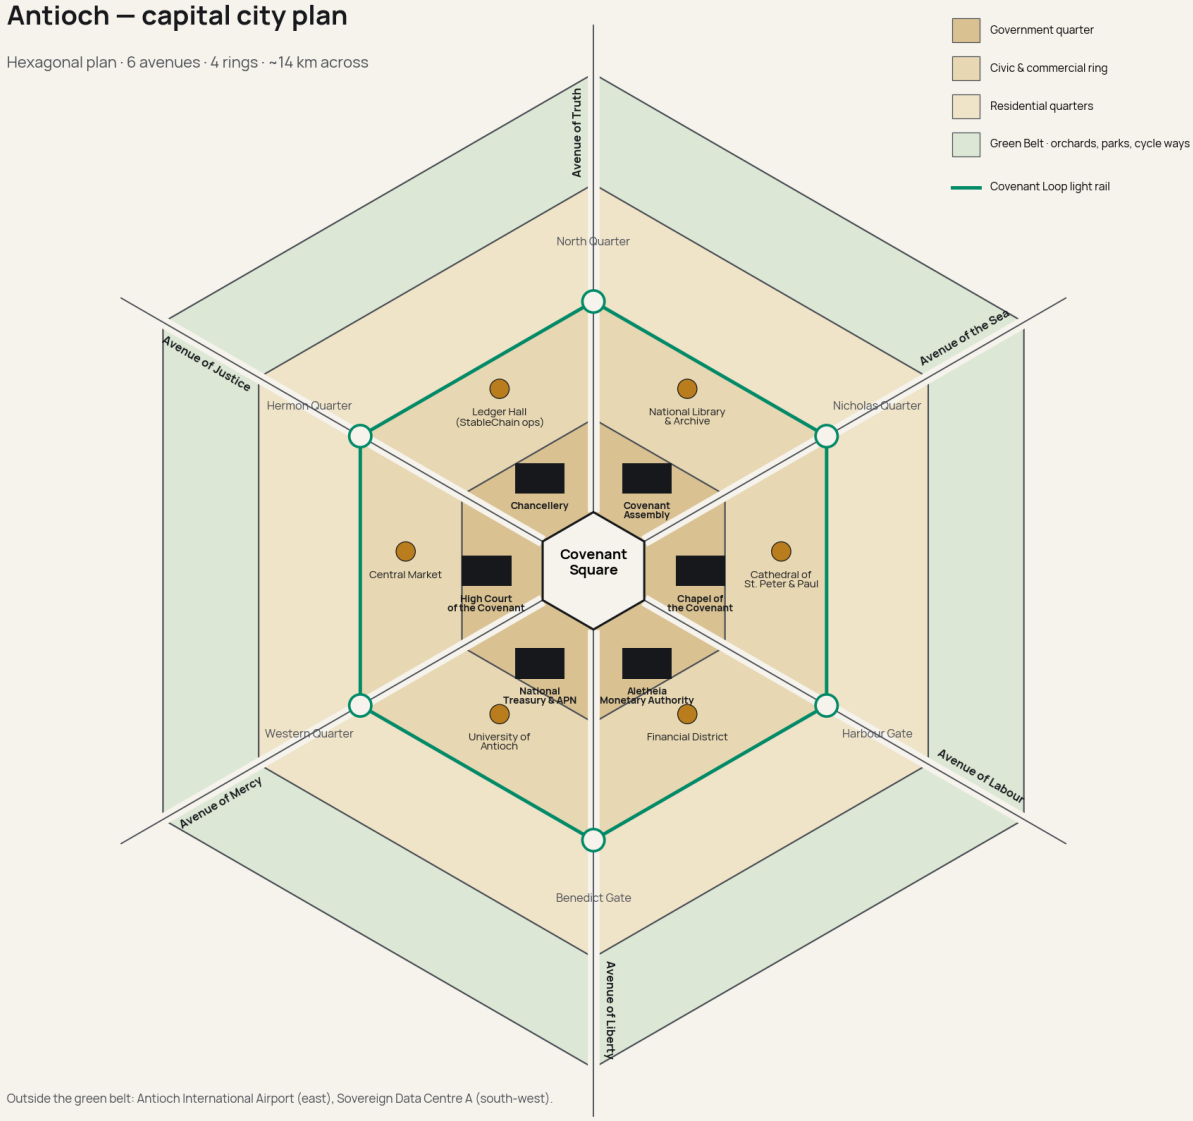

Figure 6.1 — Antioch capital city plan. About 14 km across the green belt.

6.1 The rings

Ring	Radius	Use	Rules
Covenant Square	0–0.85 km	Public square, ceremonies, markets	No vehicles; open day and night.
Government quarter	0.85–2.2 km	Assembly, Chancellery, High Court, Treasury & APN, Monetary Authority, Chapel	Height limit 6 storeys; public galleries in every institution.
Civic & commercial ring	2.2–3.9 km	Ledger Hall, National Library, University, Central Market, Financial District, Cathedral	Mixed use; ground floors open to the street.
Residential quarters	3.9–5.6 km	Six quarters of about 7,500 residents each	Every home within 400 m of a park and 800 m of a school.
Green belt	5.6–7.2 km	Orchards, parks, cycle ways, sports	No building except paths, farms and utilities.

6.2 The six avenues

The avenues carry the republic's values in their names and connect the capital to the four states: the **Avenue of Truth** runs north to Port Michael; the **Avenue of the Sea** north-east towards Port Nicholas; the **Avenue of Labour** south-east; the **Avenue of Liberty** south to San José; the **Avenue of Mercy** south-west; and the **Avenue of Justice** north-west towards Port Luke. The **Covenant Loop** light rail circles the civic ring with a stop at every avenue; trains run every 4 minutes at peak.

CHAPTER 7

The Postal and Geocoding System

An Aletheian address is five digits and a building number. The first digit names the territory; the next two digits name the hexagon; the last two digits name the block within it.

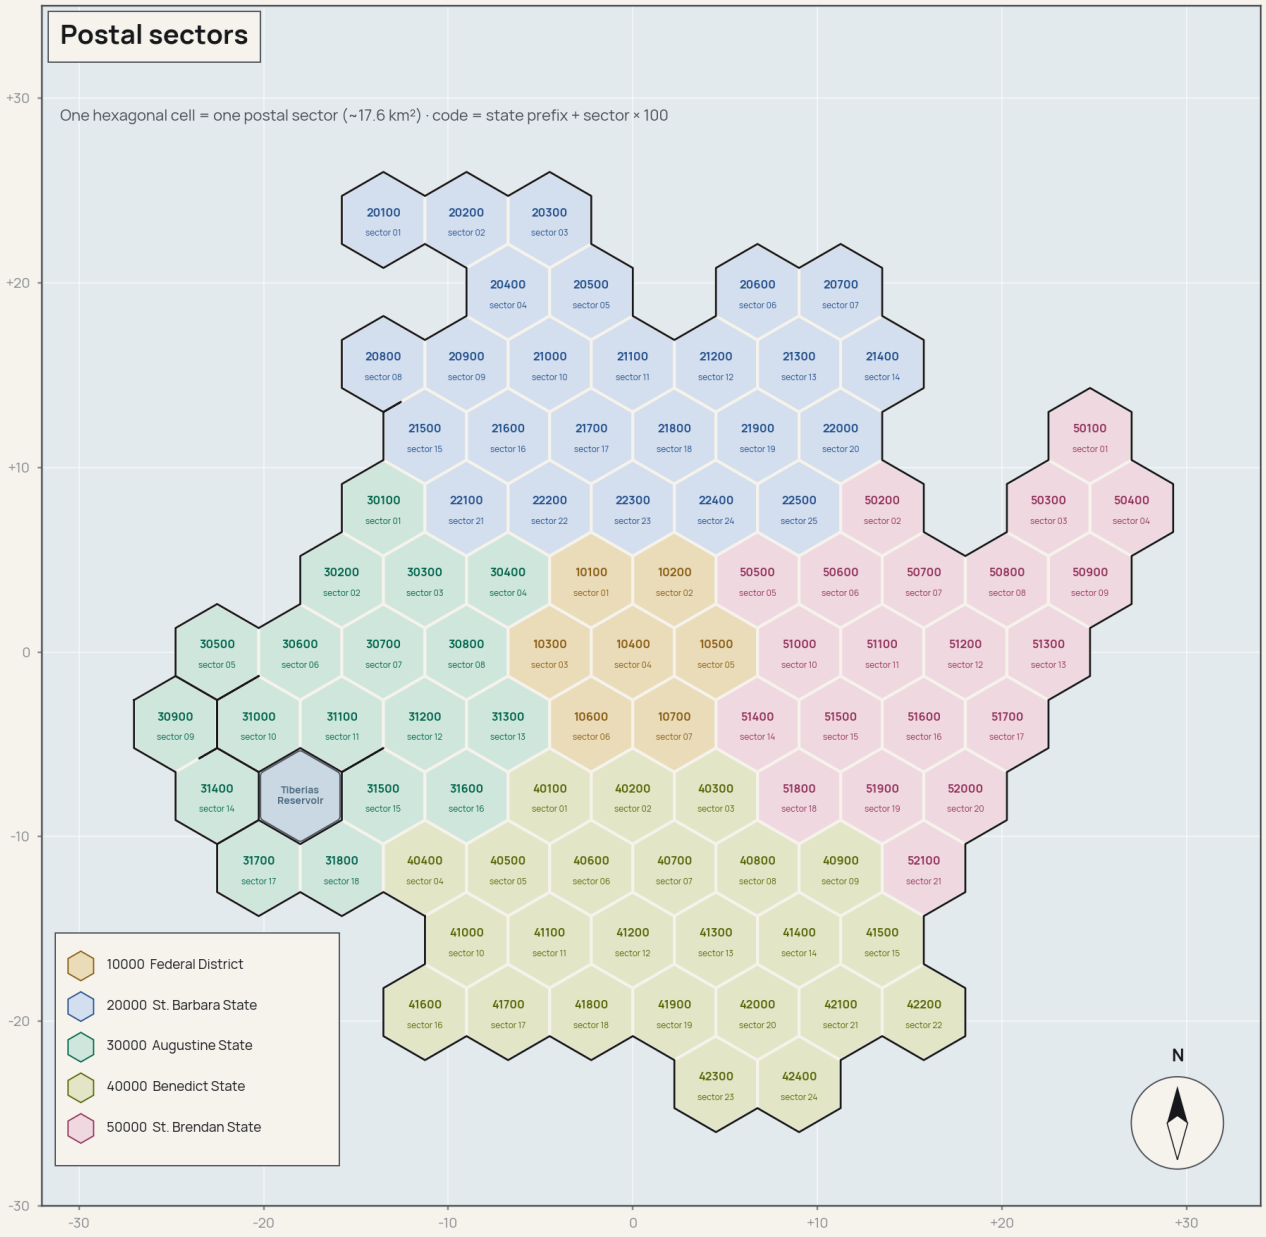

Figure 7.1 — The postal sectors. Each hexagon is about 17.6 km².

7.1 Code structure

Digit(s)	Meaning	Example 41203
1st	Territory: 1 Federal District · 2 St. Barbara · 3 Augustine · 4 Benedict · 5 St. Brendan	4 = Benedict State
2nd–3rd	Hexagonal sector, numbered north to south, then west to east	12 = sector 12, San José
4th–5th	Block inside the sector (00 = sector office; 01–99 = blocks of roughly 18 hectares)	03 = block 3

The base code of each sector ends in 00 (for example 10400 is the Covenant Square sector), which is the address of the sector's service office. The five territory prefixes 10000, 20000, 30000, 40000 and 50000 from the founding blueprint are kept unchanged.

7.2 One address, many uses

- **Logistics.** Automated ground vehicles and delivery drones route by sector and block; each block has a surveyed drop point with a fixed coordinate.
- **Identity.** A residence credential binds an identity to a postal code; the chain stores only a salted commitment, never the address itself.
- **Ledger routing.** Participant routing codes in ALX account numbers use the territory digit, so an account opened in Benedict starts its routing code with 4.
- **Emergency response.** The Unified Security Force and the fire and ambulance service dispatch by sector.
- **Statistics.** Population, energy and water use are published per sector each quarter.

CHAPTER 8

Maritime Zones and the Sea

Aletheia is a maritime republic: its sea area is many times its land area, and its ports are its link to the world.

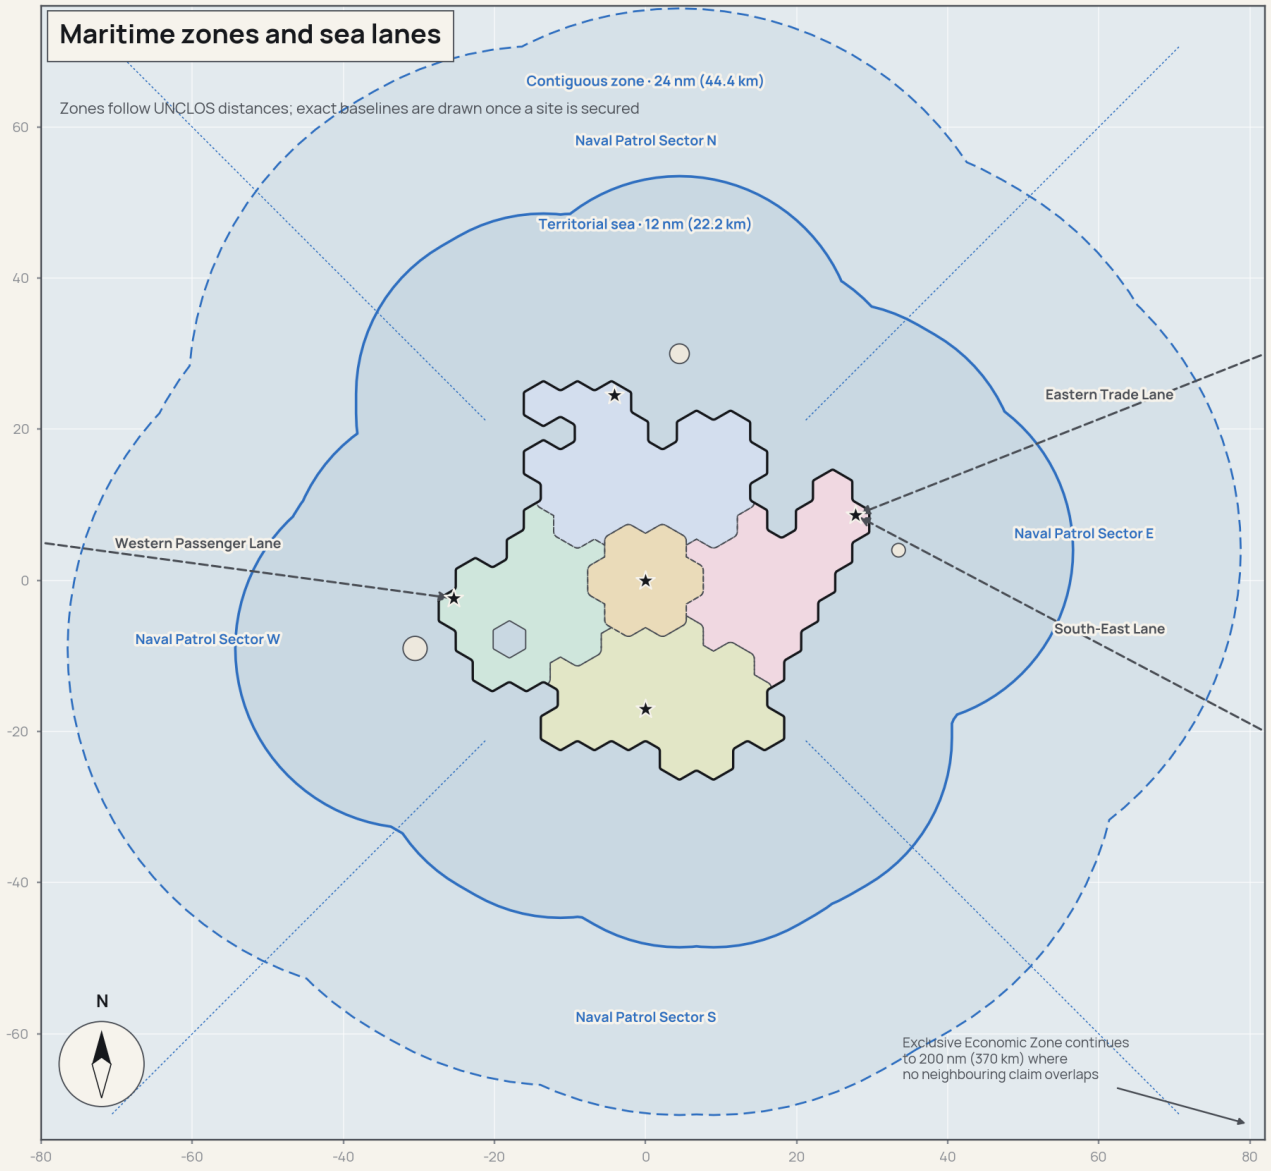

Figure 8.1 — Maritime zones and sea lanes. Distances follow the UN Convention on the Law of the Sea (UNCLOS).

Zone	Extent	What Aletheia claims there
Internal waters	Landward of baselines	Full sovereignty; ports and bays.
Territorial sea	12 nautical miles (22.2 km)	Sovereignty, subject to innocent passage of foreign ships.
Contiguous zone	24 nautical miles (44.4 km)	Customs, immigration, sanitary and fiscal enforcement.
Exclusive Economic Zone	Up to 200 nautical miles (370 km)	Fishing, seabed resources, offshore energy — only where no neighbouring claim overlaps.

Recognition comes first

Maritime zones are claimed by recognised states. Until Aletheia's status is settled with a host state or by recognition, the republic operates within the maritime law of the host jurisdiction and treats these zones as its planning boundaries, not as claims against anyone.

PART III

Government, Law and Security

A lean state: one legislature, one executive, independent courts, one security force — and a ledger that keeps them honest.

CHAPTER 9

The Structure of Government

Power is divided three ways and then checked a fourth way: by records every citizen can verify.

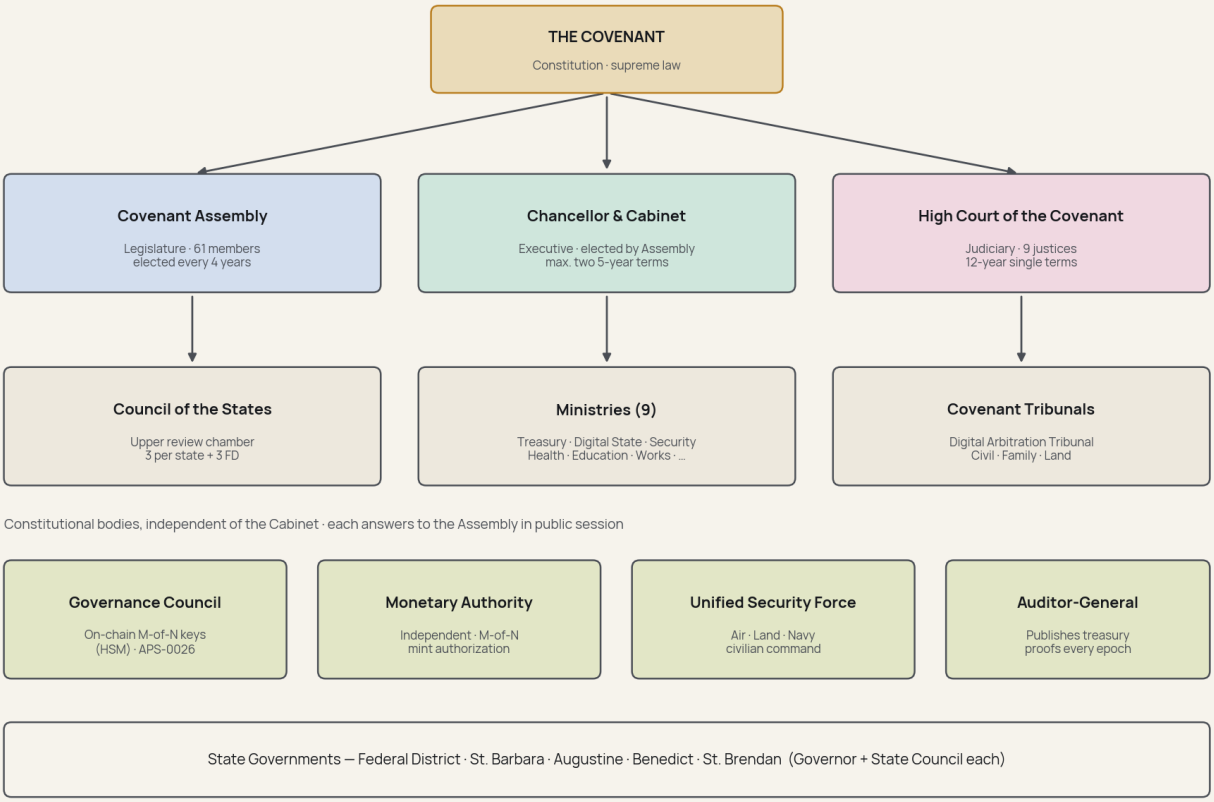

Figure 9.1 — Organs of the state.

9.1 The Covenant Assembly

The Assembly has 61 members elected every four years by open-list proportional representation. Each state and the Federal District forms a constituency, with seats in proportion to residents and a minimum of five per territory. The Assembly makes law, approves the budget, elects the Chancellor, confirms judges and holds the Unified Security Force to account through its Security Committee.

9.2 The Council of the States

Fifteen members — three appointed by each State Council and three by the Federal District — review every Act that affects the states, land, energy or the monetary system. The Council may delay such an Act by 90 days and send it back with written objections once; it cannot block it permanently.

9.3 The Chancellor and Cabinet

The Chancellor leads the government and appoints nine ministers, who must be confirmed by the Assembly. The Covenant caps the number of ministries at nine so that no new department can be created without amending Schedule 3.

Ministry	Responsibilities
Treasury & Finance	Budget, public accounts, Covenant Endowment Fund, bond issuance, tax-free revenue model.
Digital State	StableChain operations (as operator of state validators), identity, registries, e-residency, data centres.
Security	Civilian command of the Unified Security Force; emergency management; cyber defence policy.
Health	St. Luke National Hospital, primary care, public health, medical R&D; licensing.
Education	Schools, University of Antioch, academies, vocational and engineering training.
Works & Energy	SMR stations, grid, water, housing programme, roads, rail, AGV and drone corridors.
Trade & Ports	Port Nicholas, free-trade zone, customs, shipping registry, partner-bank relations.
Families & Community	Social support, citizen dividend, settlement services, parishes and civil society.
Foreign Affairs & Justice	Recognition, treaties, consular services, courts administration, law reform.

9.4 Independent constitutional bodies

Body	Role	Independence safeguards
Aletheia Monetary Authority	Holds M-of-N mint authorization keys; publishes reserve attestations; sets fee parameters within ranges set by law.	Board of 5 on staggered 7-year terms; cannot take instructions on individual mints; keys in HSMs held by separate officers.
Governance Council	The on-chain council (M-of-N HSM keys) that executes approved protocol changes and parameter updates (APS-0026).	Can only execute what an Act or Monetary Authority decision has approved; all actions timelocked and evented.
Auditor-General	Audits every ministry; publishes treasury and supply proofs every epoch and a full audit each year.	Appointed by two-thirds of the Assembly for one 10-year term; budget fixed by law.
Electoral Commission	Runs elections and referendums; publishes verifiable tallies.	Members nominated by all Assembly parties.
Ombudsman	Investigates complaints against any public body, including automated decisions.	Reports directly to the Assembly.

9.5 State governments

Each state elects a Governor and a State Council of nine. States run local planning, schools and parks, local roads, parish and community services and state economic zones. They receive a formula share of national revenue (Chapter 19) so no state depends on local taxes.

CHAPTER 10

Law, Courts and Dispute Resolution

Code can settle a payment. Only people can judge a person. Aletheia uses both, and always lets the person appeal the code.

10.1 Sources of law

- The Covenant and its Schedules.
- Acts of the Covenant Assembly and regulations made under them.
- The Aletheia Protocol Standards, for how the ledger enforces monetary and registry rules.
- A common-law tradition in the courts, drawing on English commercial law for contracts and trade.
- Laws are published in English, German, Serbian and Italian; the English text is authoritative.
- Treaties once ratified by the Assembly.

10.2 The hybrid dispute system

Track	Handles	How it works	Appeal
Digital Arbitration Tribunal	Payment disputes, escrow, smart-contract outcomes, APN returns and recalls	Deterministic evaluation of Arno contract code and ledger data, plus a human arbitrator for any fact the ledger cannot prove. Decision in 10 working days.	High Court on points of law
Civil & Family Tribunal	Contracts, employment, family, inheritance	Human judges; mediation first; hearings recorded; judgments published without personal data.	High Court
Land Tribunal	Parcel boundaries, encumbrances, title disputes	Uses Land Registry history and survey commitments; orders registry updates signed by the registry authority.	High Court
Community Mediation	Neighbour, noise and community disputes	Trained mediators from the Unified Security Force community branch and parish volunteers.	Civil Tribunal
High Court of the Covenant	Constitutional questions, appeals, judicial review	Nine justices; any person may challenge an automated decision.	Final

> **Finality of payments and the courts**
>
> A finalized ALUSD payment cannot be reversed by the ledger — that is what makes settlement final. When a court orders money returned, the order is carried out by a new, authorized transaction (a court-ordered return), recorded with its own receipt. The history is never rewritten; it is corrected in the open.

CHAPTER 11

The Unified Security Force

One force, three domains, civilian command. The Unified Security Force replaces separate police, army, navy and air force with a single trained service to remove duplication and inter-agency friction.

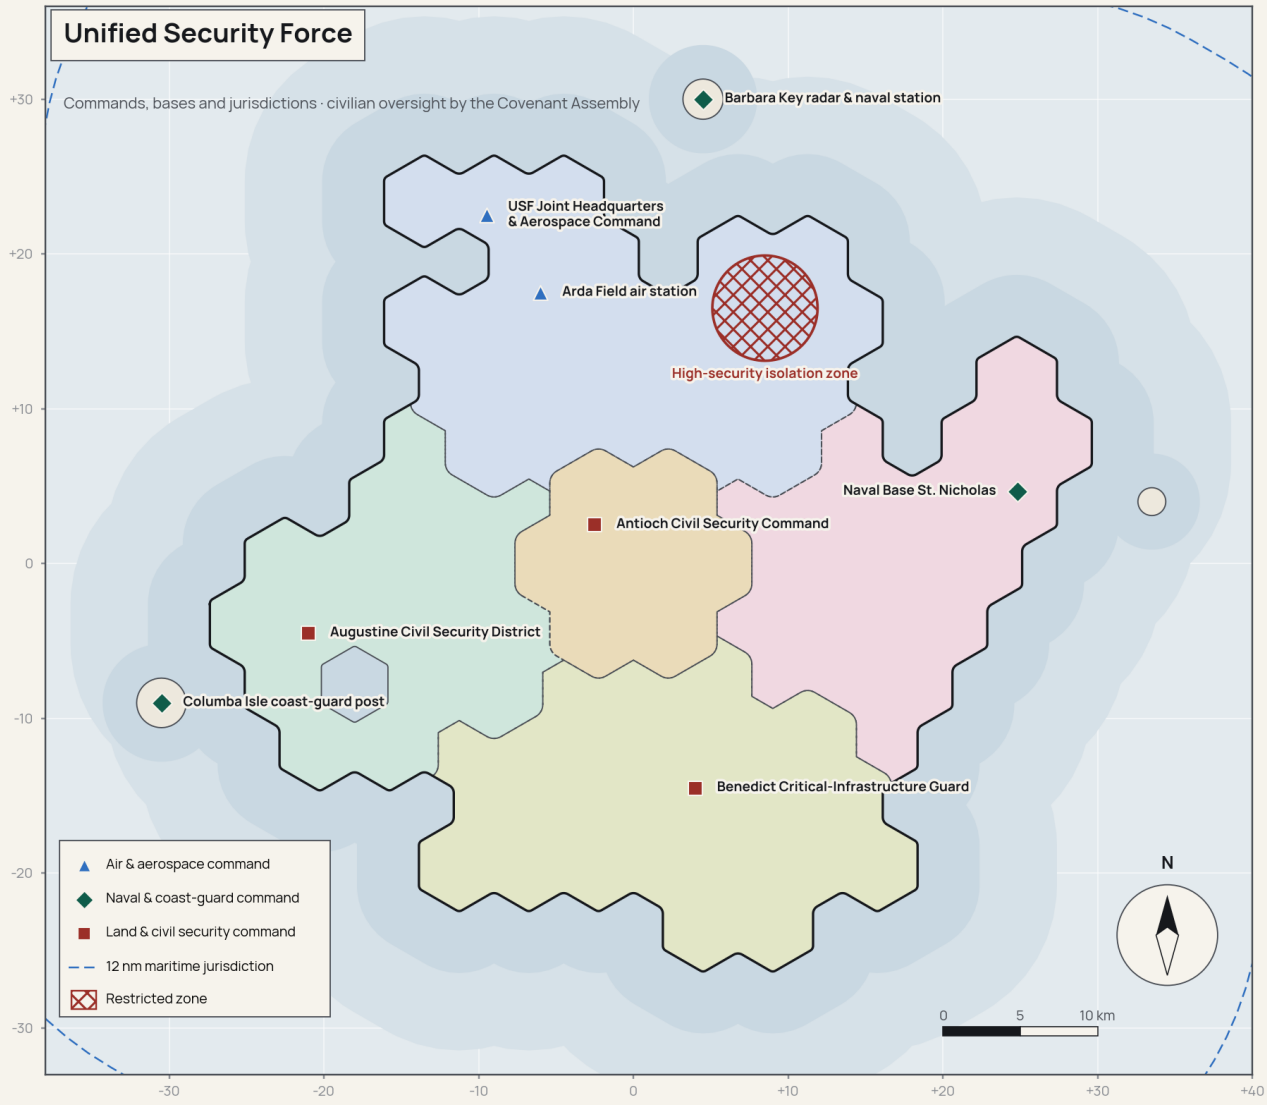

Figure 11.1 — Commands, bases and jurisdictions.

11.1 Commands

Command	Domain	Bases	Tasks
Land & Civil Security	Land	Antioch, Augustine, Benedict districts	Community policing, public order, protection of critical infrastructure, border and customs control at ports.
Naval & Coast Guard	Sea	Naval Base St. Nicholas, Barbara Key, Columba Isle	Maritime patrol in four sectors, search and rescue, fisheries protection, port security.
Air & Aerospace	Air and space	Joint HQ Port Michael, Arda Field	Airspace surveillance, air rescue, drone traffic control, satellite ground segment.
Cyber & Ledger Defence	Digital	Ledger Hall, data centres A–D	Protecting validators, HSMs and APN; incident response with the Ministry of Digital State.

11.2 Size and training

Planned strength at completion is about 2,400 personnel (1.3% of residents) with a trained reserve of 3,000. Every member completes a common 12-month foundation course — law and the Charter, first aid, maritime survival, de-escalation and firearms safety — before specialising in one domain. Promotion requires service in at least two domains.

11.3 Accountability

- Civilian command through the Minister of Security; the Assembly's Security Committee reviews operations quarterly.
- Body-worn cameras on duty; recordings sealed and hashed, with the hash anchored on the ledger so they cannot be altered.
- An independent Security Complaints Commission that reports to the Ombudsman.
- Use of force governed by necessity and proportionality; every use of force is reported within 24 hours.
- The force has no role in elections and no power over the monetary system.

PART IV

Citizens and Society

Who belongs to Aletheia, how they join, what they are promised and what they give back.

CHAPTER 12

Citizenship, Residency and Onboarding

Membership of Aletheia is by covenant: a person joins by lawful residence, a clean security review and a public oath to the Covenant. The same standards apply to every applicant.

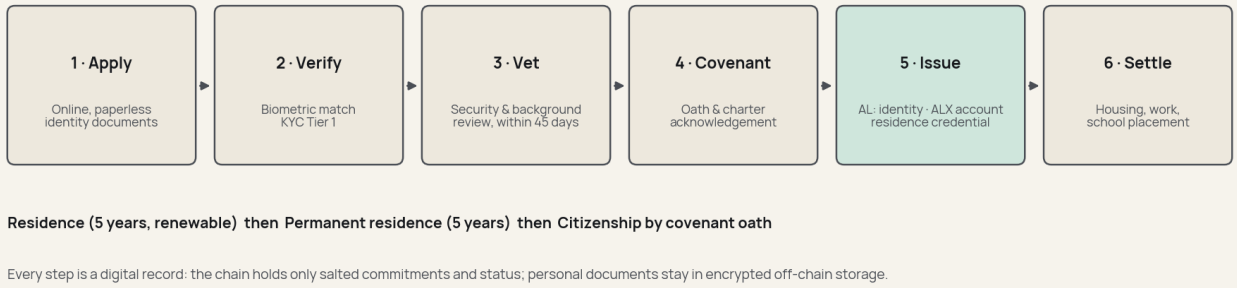

Figure 12.1 — The paperless onboarding pipeline.

12.1 Categories of membership

Status	Who	Rights	Duration
e-Resident	Anyone approved online	ALX account, digital identity, company formation, APN access (KYC Tier 1–2). No right to live on the island.	3 years, renewable
Resident	Approved applicants with a job, place of study, business or sponsor	Live and work in Aletheia; public services; vote in state elections after 2 years.	5 years, renewable
Permanent resident	5 years' lawful residence	All rights except national vote and Assembly candidacy.	Indefinite
Citizen	Born to a citizen, or permanent resident who takes the covenant oath	Full rights, national vote, passport, Assembly candidacy.	Life

12.2 Admission standards

Aletheia's founding heritage is Christian, and the Covenant says so (Article 4). Admission, however, is decided on the individual: every applicant — of any faith or none — is assessed on the same tests:

- Verified identity and a biometric match (KYC Tier 1 on the Identity Registry).
- A security and background review: criminal records in every country of residence, sanctions lists, and any history of support for violence or extremism. This review is the same for every applicant.

- Means of support: work offer, study place, business plan, investment or sponsor.
- Acceptance of the Covenant and the Charter of Rights, including the freedom of others to believe differently.
- Language: residents need working English (CEFR level A2) within two years; citizens need English at level B1 and are encouraged, not required, to reach A2 in German, Serbian or Italian. Free courses are provided.
- For citizenship: five years of lawful residence, basic civic knowledge, and the covenant oath taken in public.

Firm boundaries, applied to every applicant

Aletheia does not decide admission by a person's religion. It decides it by what a person accepts and what a person has done. The Boundaries of the Republic in 12.3 are strict and enforced without exception: anyone who rejects the supremacy of the Covenant, seeks to impose religious law, supports violence or is controlled by a foreign state's religious apparatus is refused, and loses any status already granted.

12.3 Boundaries of the Republic

Aletheia is an open society with closed doors to extremism. The following boundaries are set in the Covenant (Articles 2, 4 and 7) and in the Boundaries of the Republic Act. They apply to every person, every faith and every organisation, and they are the first thing an applicant reads.

Boundary	Rule	Consequence of breach
B1 · Supremacy of the Covenant	The Covenant and the Acts of the Assembly are the only law in Aletheia. No religious law of any tradition has legal force. Parallel courts, religious tribunals ruling on family, property or criminal matters, and private "morality" enforcement are prohibited.	Organisers face criminal prosecution; non-citizens lose residence and are removed.
B2 · Covenant Declaration	Every applicant signs a declaration accepting: the supremacy of the Covenant over any religious law; the equality of women and men; the freedom of every person to hold, change or leave a religion; freedom of speech, including criticism of religion; and the rejection of violence.	A false declaration voids the application; status obtained by it is revoked.
B3 · Extremism bar	Permanent refusal for any person who has belonged to, funded, recruited for or publicly supported a terrorist or violent extremist organisation, or who has called for holy war, violent jihad, or the killing of any group.	Refusal or revocation of any status; naturalised citizenship revoked for terror convictions where the person keeps another nationality.
B4 · No foreign state control of religion	No place of worship, religious school, charity or cleric may be funded, directed or staffed by a foreign state or its agencies. Reciprocity applies with special force: no religious body may operate in Aletheia under the control of a state that forbids public Christian worship on its own soil.	Funding forfeited; body deregistered; leaders removed if non-citizens.
B5 · Transparent finances	Every registered religious body keeps its accounts on a public ALX treasury account; every donation above ALUSD 1,000 is recorded with a verified donor identity.	Account frozen pending audit; deregistration for concealment.

Boundary	Rule	Consequence of breach
B6 · Registered clergy	Anyone who preaches or teaches religion publicly must be registered, vetted under B3, trained in the Covenant and Charter, and must preach in an official language or publish an official-language text of any public sermon on request.	Unregistered preaching is an offence; registration withdrawn for breach.
B7 · Banned organisations	Any organisation that advocates violence, holy war, the overthrow of the Covenant or theocratic rule is banned, together with its symbols, fundraising and recruitment, online and offline.	Membership is a criminal offence; assets confiscated.
B8 · Incitement	Preaching, publishing or broadcasting calls for violence, killing or the subjugation of any group — including Christians, Jews, apostates and women — is a serious crime.	Up to 10 years' imprisonment; deportation of non-citizens after sentence.
B9 · Protection of worship	Attacks on churches, synagogues and any place of lawful worship are aggravated offences. The Christian heritage of the republic, its cathedral, chapels and public holidays are protected by law.	Sentences doubled for attacks on places of worship.

Enforcement and review

- The Ministry of Security runs the screening under B2–B3 with the Ministry of Foreign Affairs & Justice; every decision is recorded and can be appealed to the High Court of the Covenant.
- The Assembly's Security Committee reviews the Boundaries every year, with the Unified Security Force's threat assessment, and publishes the numbers of refusals, revocations and prosecutions.
- Status revocations and deregistrations are recorded on the Identity and Residence registries; the reasons stay in the sealed off-chain case file.

12.4 Identity on the ledger

Identity lives in the native Identity Registry (APS-0022). The ledger stores an identity ID, its controlling key, its status and a salted commitment to attributes held off-chain. It never stores names, birth dates, documents or faith. Destroying the off-chain record and its salt makes the commitment meaningless, which gives every person a real right to erasure.

Credential	Issued by	Unlocks
KYC Tier 1 · basic	Ministry of Digital State	ALX account, payments up to the Tier 1 daily limit.
KYC Tier 2 · full	Ministry of Digital State	Higher limits, cross-border payments, e-residency company formation.
KYC Tier 3 · business	Ministry of Trade & Ports	Merchant acquiring, bulk payments, participant sponsorship.
Residence credential	Residence issuers (APS-0023)	Right to live and work; public services; state vote.
Citizenship credential	Ministry of Foreign Affairs & Justice	Passport, national vote, Assembly candidacy.

12.5 Population plan

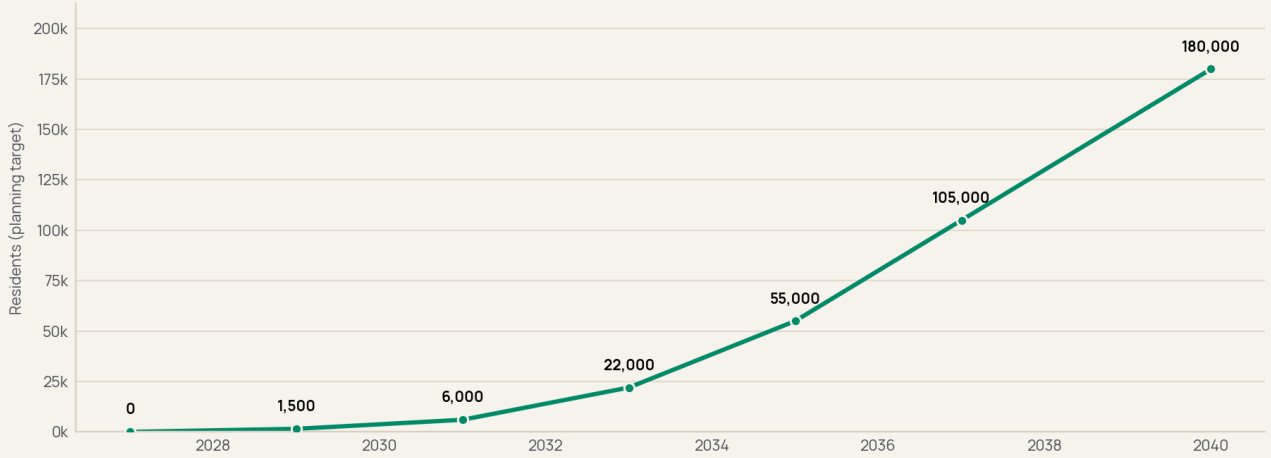

Figure 12.2 — Resident population target. Digital e-residents are counted separately (target 25,000 by 2030).

CHAPTER 13

Charter of Rights and Duties

The Charter binds every public body and every automated system acting for the state.

Part A — Rights never suspended	Part B — Rights that may be limited by law, proportionately
Life and freedom from torture or cruel treatment	Expression and the press
Freedom of religion, belief and conscience	Assembly and association
Equality before the law	Movement within and out of Aletheia
Fair trial and presumption of innocence	Privacy of communications
No punishment without law	Economic activity and property use
A human judge for any automated decision	Access to public information

13.1 Rights special to a ledger state

- **Right to proof.** Every person may obtain a Merkle proof of any public record about them.
- **Right to privacy by design.** No personal data on-chain; commitments only.
- **Right to a human.** Any decision made by code can be reviewed by a person and appealed to a judge.
- **Right to exit.** A person may redeem ALUSD for dollars through a licensed agent and leave with their assets.
- **Right to see public money.** Treasury accounts and budgets are public, line by line.

13.2 Duties

- Obey the law and respect the rights of others.
- Serve on juries and in emergencies when called.
- Keep one's private keys safe and report their loss.
- Contribute to the common good through work, service or enterprise.

CHAPTER 14

Public Services

14.1 Health

Primary care is free at the point of use through 18 neighbourhood clinics (one per 10,000 residents). St. Luke National Hospital in Port Luke provides 400 beds, emergency and specialist care, and the medical school. A biotech research park in Augustine State hosts licensed clinical research under a Health Research Act with independent ethics review. Health records are held in encrypted off-chain stores controlled by the patient.

14.2 Education

Schooling is free and compulsory from 5 to 16, with every child within 800 m of a primary school. English is the language of teaching. Every pupil learns one of German, Serbian or Italian from age 6 and a second from age 11, so that school leavers speak English and two other official languages. The University of Antioch offers engineering, law, medicine, finance and theology. A national engineering academy trains blockchain, C++, security and energy engineers for the republic's own systems, so the state can run what it builds.

14.3 Housing

The Housing Programme builds about 96,000 homes in phases (6,000 by 2033, 36,000 by 2037, 96,000 by 2041). Land is registered in the Land Registry; homes are sold or leased at cost-based prices, with a shared-ownership route for founding settlers.

14.4 Social support and the citizen dividend

Support for those who cannot work is paid in ALUSD straight to ALX accounts through the Bulk Payments scheme. Once the Covenant Endowment Fund exceeds three years of operating spending, the Assembly may pay a citizen dividend from surplus revenue — never from new issuance.

14.5 Faith and community

Parishes and congregations are self-governing civil-society bodies. The state maintains the Cathedral of St. Peter and St. Paul and the Chapel of the Covenant as national buildings, and guarantees equal legal standing to every lawful religious community.

PART V

The Financial Operating System

Honest money, instant payments and a funding model in which the state spends what it earns and never prints.

CHAPTER 15

Money: ALUSD and ALnT

Aletheia has no paper money and no coins. Its two monetary instruments are native assets of the Aletheia StableChain, built into the protocol, not smart contracts.

	ALUSD — Sovereign Stable Unit	ALnT — Aletheia Talent
Purpose	Medium of exchange, unit of account, store of value for everyday life	Network utility: validator bonding, fee payment, governance weight if adopted
Value	Redeemable 1 : 1 for US dollars through licensed redemption agents	Floats; set by the market
Base unit	10^{-6} ALUSD (6 decimals)	1 Mite = 0.001 ALnT (3 decimals)
Asset ID	1	2
Issuance	Only by M-of-N Mint Authorization against attested reserves, within governed capacity and per-epoch caps	Fixed genesis allocation; no inflation unless governance adopts a schedule by protocol upgrade
Fees	Accepted for all fees	Accepted for all fees
Supply proof	Full supply ledger and invariants I1–I12, provable against any finalized block	Same supply ledger model

15.1 Reserves

Every ALUSD in existence is matched by reserves held with regulated custodians outside the chain: short-dated US Treasury bills, overnight reverse repurchase agreements and bank deposits. A quorum of registered attestors signs a **ReserveAttestation** each epoch window; if attestations are late or the reserve ratio falls below the governed minimum, **new minting stops automatically** while transfers, burns and redemptions carry on.

Reserve layer	Share (policy)	Purpose
Cash at partner banks	10–15%	Same-day redemptions and APN external settlement
Overnight reverse repo	15–25%	Next-day liquidity
US Treasury bills up to 3 months	60–75%	Yield that funds the state (Chapter 18)
Longer bonds, equities, crypto-assets	0%	Not permitted in the ALUSD reserve

The basket question

Edition 2026.1 described ALUSD as pegged to a basket of USD, EUR, GBP and CHF. A coin named ALUSD and settled as USD in ISO 20022 messages must be redeemable in dollars, or it breaks every external mapping in the APN. This edition therefore pegs ALUSD to the US dollar and moves the multi-currency idea to the Covenant Endowment Fund, which may hold EUR, GBP and CHF assets as part of the nation's long-term savings.

15.2 Supply invariants in plain words

Rule	Plain meaning
I1–I2	What is outstanding equals what was issued minus what was burned, and every unit is in exactly one bucket: circulating, locked, reserved or bridge escrow.
I3–I4	Outstanding supply never exceeds the authorized capacity; issuance in an epoch never exceeds its cap.
I5–I6	Redemptions never exceed burns; issued, burned and redeemed totals only ever go up.
I7	The sum of every account balance equals the supply ledger — checked every block.
I8–I9	Liabilities equal outstanding ALUSD, and attested reserves cover it at the minimum ratio.
I10–I12	ALUSD sent to other chains stays locked and counted; bridged assets are fully backed; route limits hold.

If an invariant would break in a proposed block, validators refuse to vote for it. If it were ever found broken in a finalized block, every node halts rather than continue in an unknown state. The ledger never “fixes” balances by itself.

CHAPTER 16

The Aletheia StableChain

The StableChain is the republic's financial and civic infrastructure: a native C++23 blockchain with its own consensus, state machine, smart-contract language and payment network.

500 ms	~1.5 s	5,000+/s	N >= 3F+1
Nominal slot	Target p50 finality	Transfer target to measure	Byzantine fault tolerance

16.1 How a payment becomes final

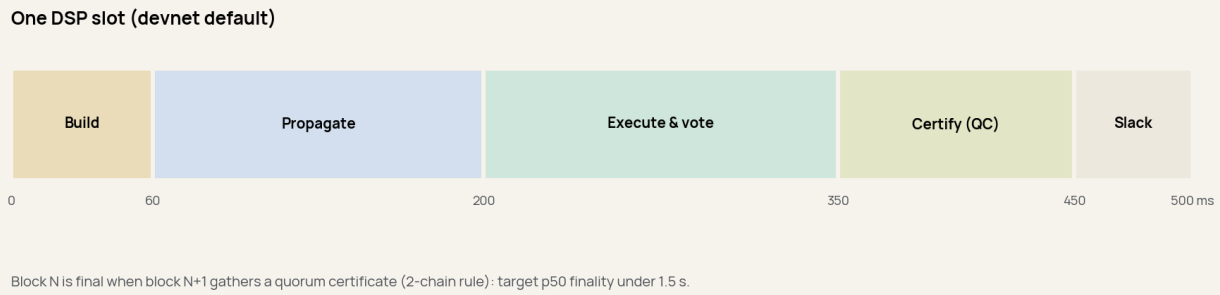

Figure 16.1 — One slot of the Deterministic Sovereign Pipeline (DSP).

DSP is a pipelined two-chain Byzantine fault-tolerant consensus. A known leader proposes each slot's block; every validator re-executes it before voting (execute-before-vote); votes are combined into a BLS12-381 aggregate quorum certificate that records exactly who signed. Block N is final the moment block N+1 is certified. Clocks, synchronised by Precision Time Protocol, only pace the network — they never decide safety.

16.2 Architecture in brief

Layer	Choice	Why it matters to the state
Language	C++23, deterministic, no floating point in money paths	Every validator computes the same result to the bit.
Consensus	DSP v0.1, equal-weight permissioned validators	Known, accountable operators in the founding phase.
Signatures	Ed25519 accounts; BLS12-381 aggregate certificates	Double-signing is provable and punishable.
State	Jellyfish Merkle Tree over RocksDB	Any balance or record can be proven to a light client.
Contracts	Arno, a Pascal-style language that reads like English	Auditors and judges can read contracts.
Keys	HSM-backed remote signers with double-sign protection	No single stolen server can forge a vote.
Identifiers	AL: addresses, AL:T transactions, AL:B blocks; no 0x anywhere	One national format, checksummed per network.
Interfaces	REST /api/v1 and JSON-RPC 2.0 /rpc/v1	Banks, wallets and ministries integrate the same way.
Explorer	“The Public Ledger” — verifies proofs in the browser	Citizens can check the state's accounts themselves.
Languages	Wallets, Explorer and APN customer screens in English, German, Serbian and Italian	Everyone can use the national money in an official language.

16.3 Validators and resilience

The founding network runs 7 validators, rising to 13 and then 19 as operators are certified. No more than F validators (fewer than one third) may share a data centre, provider or jurisdiction. State validators run in the four sovereign data centres; the rest are run by licensed banks, universities and allied institutions, including at least two outside Aletheia so the ledger survives a local disaster.

CHAPTER 17

The Aletheia Payment Network (APN)

The APN is Aletheia's national payment system and its SWIFT-equivalent link to the world: one directory, one set of schemes, one lifecycle, final settlement in ALUSD, 24 hours a day.

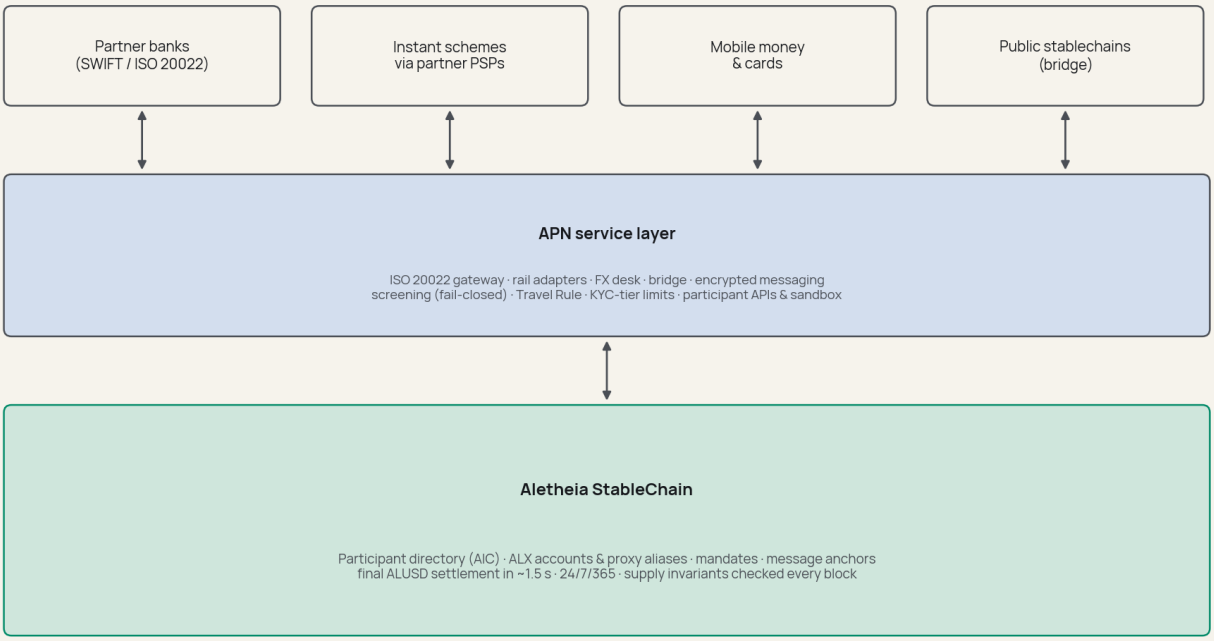

Figure 17.1 — APN architecture.

17.1 Accounts and addresses

Identifier	Form	Use
AL: address	AL: + 59 characters, Bech32m checksum	The canonical protocol identity of an account
ALX account number	ALX 47 1234 5678 9012 3456 (21 characters stored)	Forms, invoices, payroll, external systems; ISO 7064 mod-97 check
Proxy alias	Phone, email, residence ID, @handle	Pay a person without typing an address; stored only as a salted hash
AIC	BIC-shaped institution code	Identifies banks, PSPs, agencies and FX providers in the Participant Directory
Payment QR	aletheia:pay?to=AL:…&amount=…	Shops and in-person payments

ISO country fields never use **AL**, which is Albania's code; the republic proposes the user-assigned code **XL** and agrees mappings with each partner bank.

17.2 Payment schemes

Scheme	Everyday example
Instant credit transfer	Pay a neighbour by phone number; final in seconds.
Bulk payments	Payroll, pensions and social support paid to thousands of accounts at once.
Request-to-pay	A utility sends a bill; the citizen approves it in their wallet.
Direct debit with mandate	A signed, cancellable mandate for rent, subscriptions or loan repayments.
Standing orders	Monthly transfers executed by the protocol when funded.
Returns and recalls	Money sent back, linked to the original payment; finality stands.
Merchant payments	QR and card payments through licensed PSPs.
Conditional payments	Arno escrow contracts for property, trade and milestones.

17.3 Connection to the outside world

External money enters and leaves through licensed partner and correspondent banks (ISO 20022 over their SWIFT connectivity), partner payment service providers for instant schemes abroad, mobile-money and card partners, and the public stablechain bridge. ALUSD minted against an inbound payment must reference that payment, and daily reconciliation (R1–R3) freezes minting for any partner whose statements do not match.

CHAPTER 18

The National Funding Model

The whole republic is funded from the StableChain economy — but not by printing coins. Aletheia earns from the reserves behind ALUSD, from the payment network and from the services of the state, and it borrows openly in its own currency.

The rule that protects everything else

ALUSD is never minted to pay for government. Minting without reserves would break invariant I9, stop the network's own minting safeguards and destroy the 1 : 1 promise that gives ALUSD its value. A state that can print its own stable coin will be tempted to; Aletheia removes the temptation in code.

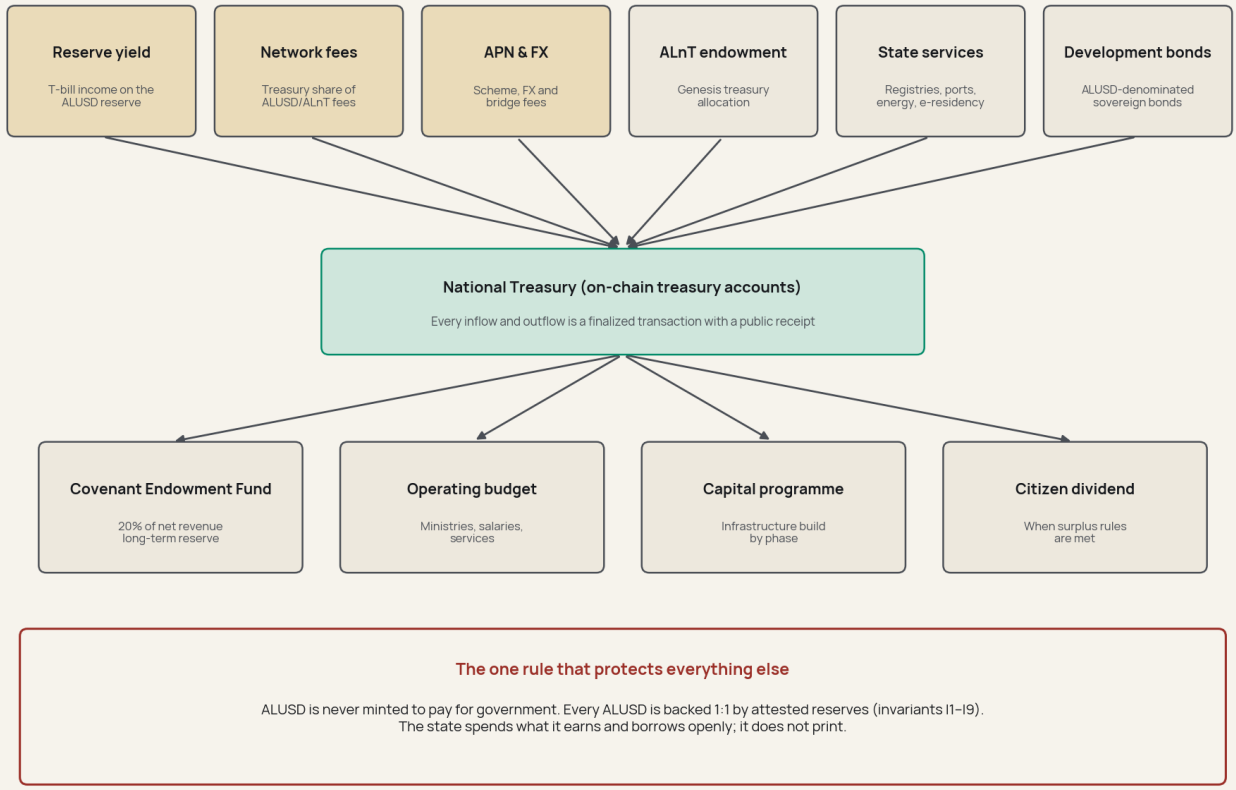

Figure 18.1 — How money flows into and out of the National Treasury.

18.1 Revenue streams

Stream	Source	Planning assumption
Reserve yield	Interest on the T-bills and repo that back ALUSD. Holders get stability and instant payments; the state keeps the yield.	85% of reserves invested at 4.0%, less 0.15% running costs
Network fees	Treasury share of transaction fees paid in ALUSD or ALnT.	Average fee $0.02; treasury share 30% (rest pays validators)
APN, FX & bridge	Scheme fees on external legs, FX spreads, bridge fees (5 bps per route).	Blended 0.20% of external payment volume
ALnT endowment	Sales of the Treasury's genesis ALnT to validators and institutions; staking income.	Released gradually under a published schedule
State services	e-Residency, company registry, land and residence registry fees, port dues, energy and water sales, free-zone licences.	Grows with population and trade

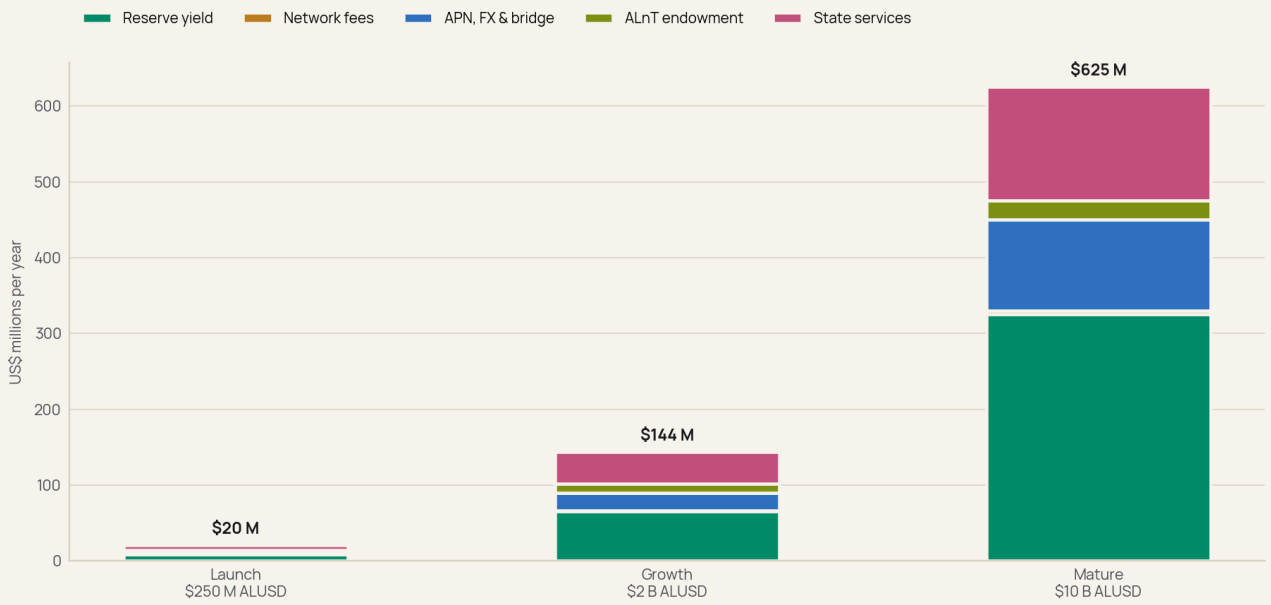

Figure 18.2 — Annual Treasury revenue at three stages of the economy (US$ millions).

Stream (US$ M / year)	Launch · $250 M ALUSD	Growth · $2 B ALUSD	Mature · $10 B ALUSD
Reserve yield	8.1	65.0	325.0
Network fees	0.1	0.9	5.5
APN, FX & bridge	2.0	24.0	120.0
ALnT endowment	4.0	12.0	25.0
State services	6.0	42.0	150.0
Total	**20.2**	**143.9**	**625.5**

Reserve yield dominates, which makes the funding model sensitive to interest rates. Each one-percentage-point fall in T-bill yields removes about $85 million a year at the mature stage. The budget therefore plans on a conservative rate and puts surpluses into the Endowment Fund to smooth years of low rates.

18.2 No income tax, low indirect charges

Because the reserve yield and network revenue fund most public spending, Aletheia plans **no personal income tax and no corporate income tax**. It charges for specific services (registries, ports, utilities) and may levy a small consumption charge on imported luxury goods. The Assembly must publish, each year, how much of the budget each stream paid for.

18.3 Sovereign Development Bonds

Building a city, a port and a power station costs more than a young economy earns in a year. Aletheia borrows for long-lived assets only, through **Sovereign Development Bonds** issued as native ALUSD-denominated instruments on the StableChain:

- Coupons and principal are paid automatically from Treasury accounts; payment history is public.
- Proceeds are ring-fenced to named projects (for example, Port Nicholas Berth 1) and tracked on-chain.
- Debt service is capped at 15% of the previous year's revenue by the Fiscal Responsibility Act.
- Bonds are sold to institutions and qualified investors under the securities law of each market where they are offered.

18.4 Financing the build programme

Phase	Years	Cost (US$ M)	Main works
A · Digital State	2026–2029	60	StableChain mainnet, APN, e-residency, identity, sovereign data centres (leased)
B · Foothold	2029–2033	1,400	Site and host agreement, Port Nicholas berth 1, Antioch core, first desalination and solar, 6,000 homes
C · Settlement	2033–2037	4,200	Full Antioch plan, SMR Station I, Benedict farms, hospital, university, 30,000 homes
D · Completion	2037–2041	5,800	SMR Station II, all four state capitals, deep-water berths 2–6, 60,000 homes
Total	2026–2041	**11,460**	

Source of capital for the build programme	Share
Treasury revenue (surplus after operating budget)	18%
Sovereign Development Bonds (ALUSD-denominated)	34%
Concessions & PPP (ports, energy, housing)	30%
ALnT endowment sales to validators & institutions	8%
Development-partner and diaspora investment	10%

Honest arithmetic

The build programme costs about $11.5 billion over fifteen years. Even at the mature stage the Treasury earns about $625 million a year, so revenue alone cannot pay for the build. Two things must be true for the plan to work: ALUSD adoption must grow to several billion dollars outstanding (through e-residents, partner institutions and cross-border users, not only residents), and concession partners must finance the port, energy and housing assets that earn their own income. Each phase starts only when its financing is committed.

18.5 The Covenant Endowment Fund

Ten per cent of the budget, and every surplus, goes to the Covenant Endowment Fund — the nation's long-term savings. It may hold diversified assets (including EUR, GBP and CHF instruments) and is managed under a published investment policy. Withdrawals are limited to 3% of the fund's value a year. The fund exists so that the republic outlives low-interest years, emergencies and the people who founded it.

18.6 Capacity and the long-range figure

Planning papers have mentioned a very large long-range ALUSD capacity (830 trillion USD-equivalent). That figure is not a target and is not in the code. Capacity is a governed parameter that can only grow by a timelocked governance decision and only up to what attested reserves cover.

CHAPTER 19

The National Budget

The budget is published as a ledger, not a report: every allocation is a treasury account, and every payment from it is a transaction anyone can inspect.

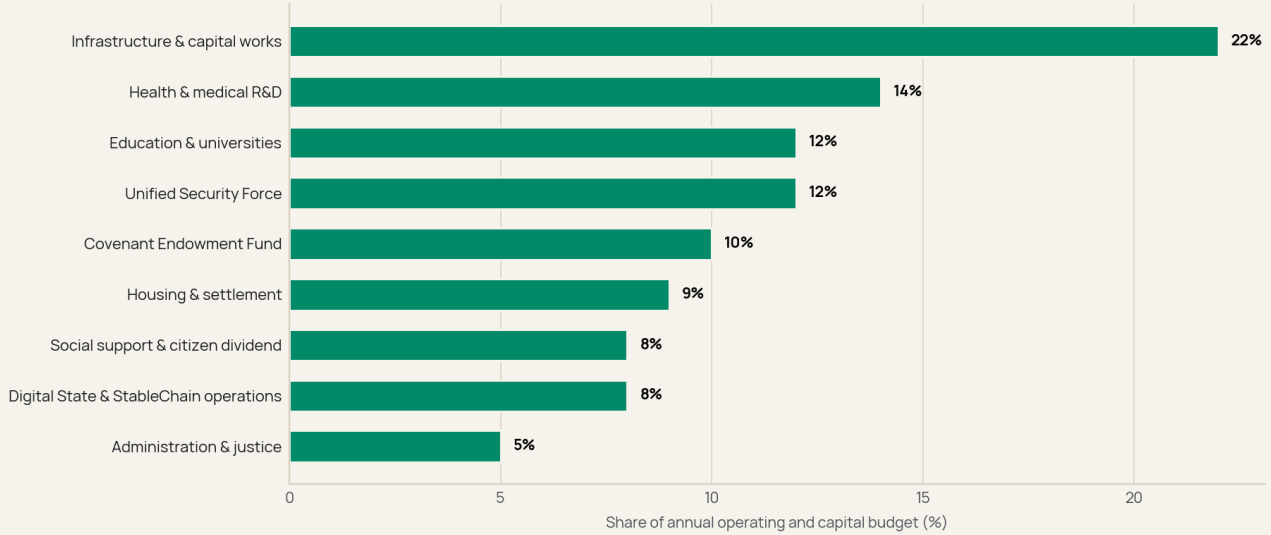

Figure 19.1 — Planned budget shares at the mature stage.

19.1 Fiscal rules

Rule	Requirement
Balanced operations	Operating spending must be covered by recurring revenue averaged over three years.
Borrow only to build	Bonds fund capital assets only, never salaries or transfers.
Debt-service cap	Interest and principal at most 15% of the previous year's revenue.
Endowment first	At least 10% of revenue and every surplus to the Covenant Endowment Fund.
States' share	22% of revenue shared with the four states and the Federal District by a formula of population, area and need.
No money printing	No mint authorization may be linked to a government spending account.

19.2 Budget cycle

- Epoch-level treasury proofs are published by the Auditor-General automatically.
- The Chancellor presents the budget in September; the Assembly votes by December.
- Approved allocations are loaded into programme treasury accounts with spending limits enforced on-chain.
- Every quarter, each ministry publishes spending against plan; the Explorer shows it live.

CHAPTER 20

The Economy

Aletheia's economy has five engines, one in each territory, joined by a common ledger and a free-trade port.

Sector	Where	What Aletheia offers
Digital finance	Federal District	Final settlement in seconds, programmable ALUSD, licensed PSPs and banks, e-residency companies.
Trade & logistics	St. Brendan	Free-trade zone, deep-water berths, automated customs on the ledger.
Energy & utilities	Benedict	Low-carbon power from SMRs and solar; energy-intensive data centres; desalinated water.
Health & life sciences	Augustine	Hospital, medical school, licensed clinical research.
Defence & aerospace	St. Barbara	Secure engineering zone, shipyard, satellite ground segment.
Food	Benedict	Vertical farms and aquaculture for full food independence in staple vegetables and fish.
Education	Augustine & FD	Engineering academy and university drawing international students.

PART VI

Infrastructure

Power, water, food, transport and a sovereign data backbone for a republic of 180,000.

CHAPTER 21

Physical Infrastructure

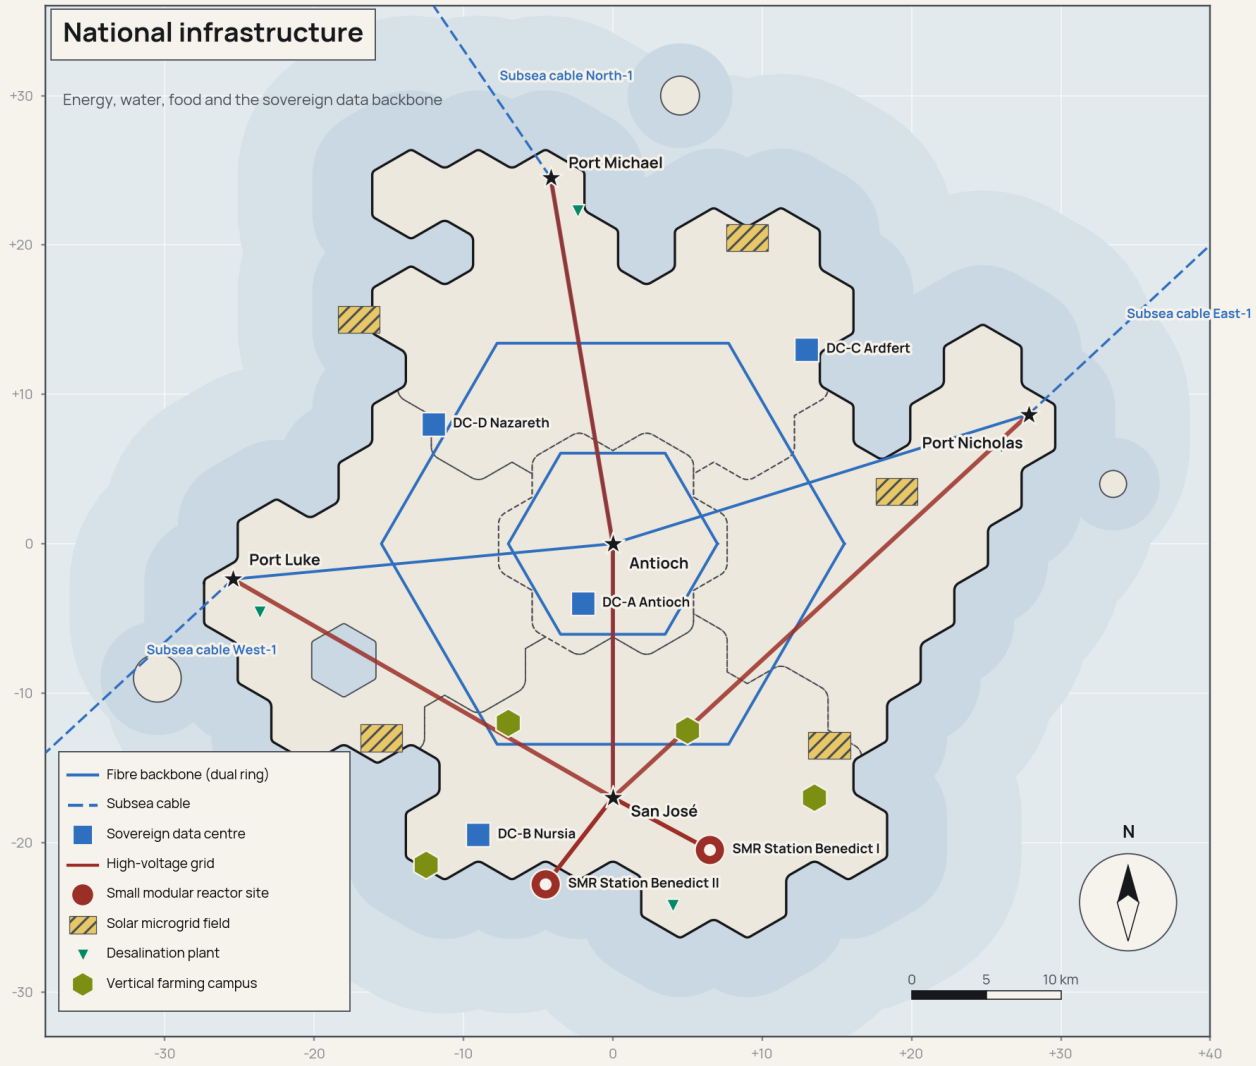

Figure 21.1 — National infrastructure.

21.1 Energy

Peak demand is planned at about 450 MW, driven by homes, desalination, vertical farms and data centres. Two small modular reactor stations in Benedict State provide firm power; five solar microgrid fields and battery storage cover daytime peaks and keep each state running on its own if the backbone is cut.

Source	Capacity (planned)	Timing	Notes
Solar microgrids + batteries	180 MW + 400 MWh	2031–2036	First power; one field per state.
SMR Station Benedict I	300 MW (e.g. 4 × 77 MW modules)	Licence 2031, power 2038	Subject to licensing with an experienced nuclear regulator.

Source	Capacity (planned)	Timing	Notes
SMR Station Benedict II	300 MW	2039–2041	Built once Station I is proven.
Diesel/biofuel reserve	60 MW	2031	Emergency only; retired from daily use once SMR I runs.

Nuclear realism

No island state builds its first reactor alone. Aletheia will license its SMR stations through a partnership with an established nuclear regulator and vendor, and the plan does not depend on nuclear power before 2038: solar, storage and the reserve generators carry the first settlement waves.

21.2 Water

Four reverse-osmosis desalination plants (Port Luke, Port Nicholas, Port Michael and the Benedict south shore) supply about 60,000 m³ per day at completion, with Tiberias Reservoir holding roughly 330 days of demand. Waste water is treated and reused for farms and green belts.

21.3 Food

Vertical farming campuses at Nursia, Monte Cassino and two further sites grow leafy vegetables, herbs and fruit under LED light; south-shore aquaculture supplies fish. The target is full self-sufficiency in fresh vegetables and fish, with grains and other staples imported through Port Nicholas and held in a 90-day strategic store.

21.4 Transport

Mode	Plan
Roads	The hexagonal Covenant Ring around Antioch and four arterial roads to the state capitals; speed limit 60 km/h outside cities.
Rail	Covenant Loop light rail in Antioch; a 90 km island line linking all five capitals by 2040.
Automated ground vehicles	Freight AGVs on dedicated lanes, routed by postal sector and block.
Drones	Parcel and medical drones in corridors managed by the Air & Aerospace Command.
Air	Antioch International Airport (runway 3,200 m) and Arda Field (security and emergency).
Sea	Port Nicholas for cargo; Port Luke for passengers; Port Michael naval and shipyard.

21.5 The sovereign data backbone

A dual fibre ring — an inner hexagon around Antioch and an outer ring through the four states — links the four sovereign data centres with at least two independent paths to each. Three subsea cables land at Port Nicholas, Port Michael and Port Luke so the loss of any one leaves the country connected. The StableChain's cryptography is agile: post-quantum signatures (ML-DSA, FIPS 204) are reserved in the protocol and can be activated by upgrade when standards and hardware are ready.

CHAPTER 22

Cyber Security and National Resilience

A ledger state must defend its keys as seriously as its coastline.

Threat	Main defences
Theft of validator or mint keys	HSMs, remote signers with double-sign protection, M-of-N control, key ceremonies in the St. Barbara isolation zone.
Byzantine or failed validators	DSP tolerates fewer than one third faulty; evidence of equivocation suspends the validator.
Loss of a data centre or island-wide outage	Four domestic data centres plus validators abroad; snapshots and archives replicated off-island.
Fraud in the payment network	Fail-closed screening, KYC-tier limits, confirmation of payee, reconciliation freezes.
Bridge exploits	Per-route caps, delayed large transfers, automatic pause on conflicting proofs.
Insider abuse	Separation of duties, public privileged-operations register, Auditor-General review.
Natural disaster	Building codes for storms and earthquakes, 90-day food and fuel stores, microgrids per state.

22.1 Continuity of the state

If Antioch were disabled, the Chancellery relocates to Port Luke and the Treasury to the Nursia data centre; the Assembly may sit remotely with votes signed by members' keys. Because the ledger is replicated abroad, citizens' balances, land records and identities survive even the loss of the island's own systems.

PART VII

Relations, Roadmap and Risks

How Aletheia takes its place among nations, the order in which it is built, and what could go wrong.

CHAPTER 23

Foreign Relations and Recognition

Aletheia needs friends before it needs flags. Its first foreign policy goal is lawful territory; its second is recognition; its third is banking access.

23.1 Pathways to territory

Pathway	How it works	Trade-off
Host-state agreement	A special autonomous zone within an existing state, with its own charter and financial system.	Fastest and most realistic; sovereignty is shared.
Long concession	A 99-year lease of an island or coastal area with wide self-government.	Clear title; limited recognition.
Purchase with cession	A state cedes territory by treaty.	Full sovereignty; rare and slow.
Maritime platform	Built structures in international waters.	Technically hard; recognition unlikely.

The founding plan pursues host-state agreements and concessions first, while the digital state — e-residency, ALUSD and the APN — operates through licensed legal entities in cooperating jurisdictions from 2028.

23.2 Priorities

- Membership of international standards bodies relevant to payments and shipping.
- Correspondent banking relationships in at least three currency areas before physical settlement.
- Tax and information-exchange agreements so Aletheia is never listed as a secrecy haven.
- Mutual legal assistance and extradition agreements, so the republic cannot be a refuge from justice.

CHAPTER 24

Roadmap 2026–2041

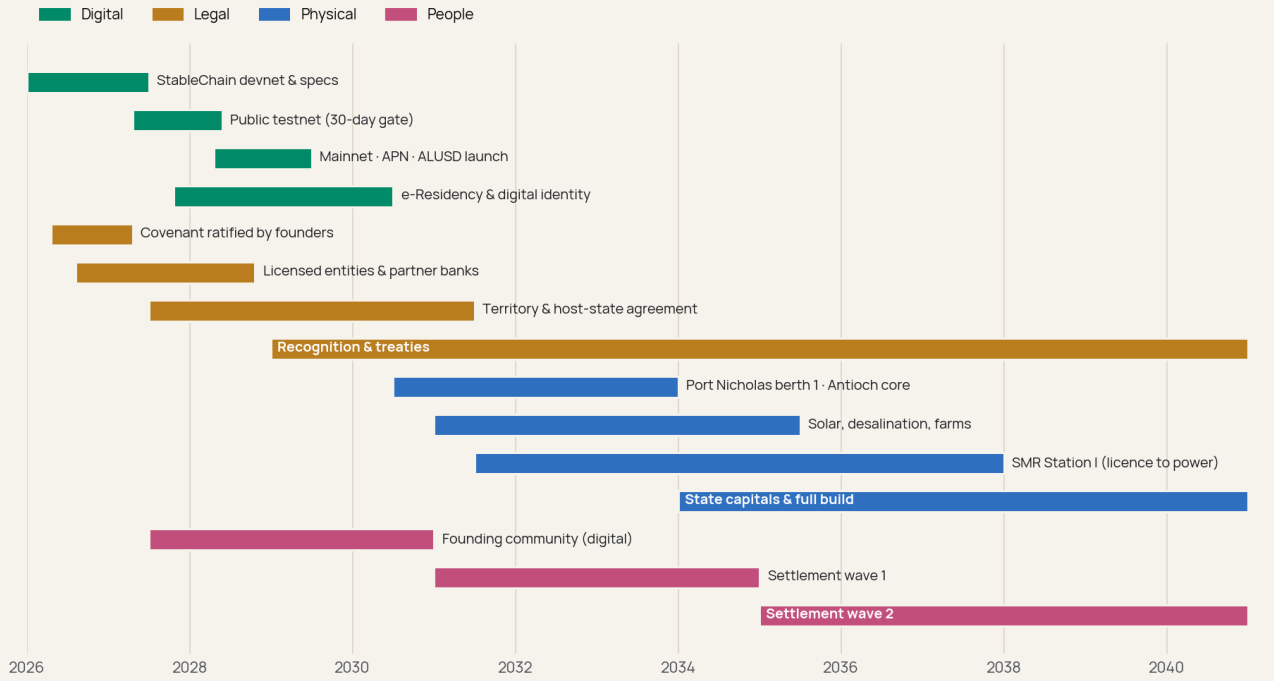

Figure 24.1 — Master roadmap across four workstreams.

Gate	Target	Proceed only when
G1 Testnet	2027	StableChain simulator Byzantine suite green; external audit of consensus, crypto and VM.
G2 Mainnet & APN	2028–29	30-day testnet with no safety violation; partner banks signed; reserve custodians appointed.
G3 Territory	2031	Signed host-state agreement or concession; environmental and social assessment complete.
G4 First settlers	2031	Water, power, clinic, school and 1,500 homes ready; Phase B financing committed.
G5 Nuclear	2038	SMR licence, operator and trained staff in place; solar and storage carry base demand until then.
G6 Completion	2041	All capitals built; Endowment Fund at three years of operating spending.

CHAPTER 25

Risk Register

Risk	Likelihood	Impact	Response
No territory secured	High	High	Digital state runs regardless; multiple site negotiations in parallel; physical phases gated on G3.
Low ALUSD adoption	Medium	High	Target e-residents, remittance corridors and institutions; keep operating costs small until revenue grows.
Interest rates fall	Medium	High	Budget on conservative rates; Endowment Fund smooths revenue; diversify fee income.
Banking de-risking	Medium	High	Strict compliance, Travel Rule, sanctions screening; several partner banks per currency.
Regulatory action against the stablecoin	Medium	High	Issue through licensed entities; full reserves; monthly independent attestation.
Key compromise or consensus failure	Low	Very high	HSMs, M-of-N, double-sign protection, fail-stop design, off-island replicas.
Construction cost overrun	High	Medium	Phase gates, fixed-price concessions, 20% contingency per phase.
Recognition blocked by discriminatory law	High if adopted	High	Admission by individual review, not religion (Chapter 12).
Nuclear delay	High	Medium	Plan does not rely on nuclear power before 2038.

APPENDIX A

Glossary

Term	Meaning
AIC	Aletheia Institution Code, the BIC-shaped identifier of an APN participant.
AL: / AL:T / AL:B	Checksummed text forms of an address, a transaction ID and a block ID.
ALnT	Aletheia Talent, the native utility and staking asset (1 ALnT = 1,000 Mites).
ALUSD	The Sovereign Stable Unit, redeemable 1:1 for US dollars, backed by attested reserves.
ALX	Prefix of the 21-character Aletheia account number.
APN	Aletheia Payment Network: directory, schemes, messaging, settlement and external rails.
APS	Aletheia Protocol Standards, the formal technical standards of the StableChain.
Arno	Aletheia's Pascal-style smart-contract language.
DSP	Deterministic Sovereign Pipeline, the StableChain's consensus mechanism.
Epoch	512 slots (about 4 minutes 16 seconds at 500 ms per slot); validator-set and cap changes happen at epoch boundaries.
HSM	Hardware security module: tamper-resistant hardware that holds keys.
Invariant	A rule the ledger checks after every block (I1–I12 for money).
Quorum certificate	An aggregate BLS signature showing that at least two thirds of validators approved a block.
UETR	The ISO 20022 end-to-end tracking reference carried by every payment.

APPENDIX B

Key Figures

Measure	Value
Planned land area (main island)	1,762 km²
Islets (Barbara Key, Covenant Reef, Columba Isle)	16 km²
Postal sectors	95 (size of each about 17.6 km²)
Residents target 2040	180,000
e-Residents target 2030	25,000
Official languages	English (working language), German, Serbian, Italian
Covenant Assembly	61 members, 4-year terms
Unified Security Force	About 2,400 personnel + 3,000 reserve
Founding validators	7, rising to 19
Slot / epoch	500 ms / 512 slots
Build programme	US$ 11,460 million, 2026–2041
Treasury revenue, mature stage	About US$ 625 million per year
Peak electricity demand	About 450 MW
Desalination capacity	About 60,000 m³ per day

APPENDIX C

Changes From Edition 2026.1

Every change from the founding three-page blueprint is recorded here, with its reason.

Topic	Edition 2026.1	This edition	Reason
Consensus signatures	BLS threshold aggregation	BLS12-381 aggregate multi-signatures with signer bitmap; threshold BLS reserved for the randomness beacon	Matches Engineering Spec v2.4; aggregate certificates keep validators accountable.
ALUSD peg	Basket of USD, EUR, GBP, CHF	1:1 US dollar; basket assets held by the Endowment Fund	ALUSD settles as USD in ISO 20022 messages; a basket peg would break redemption and APN mappings.
ALnT role	Exclusively fees, gas and staking	Fees payable in ALUSD or ALnT; ALnT for staking and fees	Spec ADR-014 accepts both fee assets; people should not need a second asset to pay.
Gas	Gas	Execution Units (EU)	Protocol terminology.
Residency by religion	Excluded one faith group	Boundaries of the Republic B1–B9 and individual security review for every applicant	Firm, enforceable boundaries against extremism and foreign state control of religion, applied to every applicant (12.3).
Faith documentation	Church or synagogue records required	Not required	Admission does not depend on faith; the ledger never stores religion.
“Quantum-resistant backbone”	Stated as a fact	Crypto-agile; post-quantum signatures reserved for activation	Accurate description of what the protocol provides today.
Dispute resolution	Automated arbitration for digital disputes	Automated evaluation with a human arbitrator and appeal to judges	Right to a human (Charter).
Languages	Not specified	English (working), German, Serbian and Italian official; further languages through the National Language Institute; Arabic not in the state programme	Added at the Founding Council's direction (Article 5, Chapter 3).
National symbols	Seal and hexagon flag	Quartered coat of arms of the four states; two flag options; passport cover and design brief	Added at the Founding Council's direction (Chapter 3, Appendix D).
Dinar	Deprecated	Not used	Unchanged.

APPENDIX D

Passport Design Brief

This brief is the handover document for the designer and the security printer. It specifies what the Aletheian passport must contain and achieve. The printer produces the final artwork, security design and personalisation files under a confidentiality agreement.

Before any passport is issued

A passport is accepted at borders only when other states recognise the issuing state and the document meets ICAO Doc 9303. Aletheia issues passports only after recognition and after obtaining an ICAO issuing-state code and joining the ICAO Public Key Directory. Until then, design work is preparatory and no document is personalised or issued. Designs and proofs are confidential and must not be published.

D.1 Governing standards

Area	Standard	Applies to
Machine-readable travel documents	ICAO Doc 9303, Parts 1–5 (TD3 booklet)	Size, zones, data page layout, MRZ
Electronic passports	ICAO Doc 9303, Parts 9–12	Chip data (LDS), security protocols, PKI
Contactless chip	ISO/IEC 14443	Chip and antenna in the cover or data page
Portrait	ISO/IEC 39794-5 and ICAO portrait guidelines	Primary and secondary portraits
Security printing	ISO 14298 or Intergraf certification	The printer's facility and processes
Security features	EU / ICAO minimum security standards (as a benchmark)	Substrate, printing, OVD, personalisation

D.2 Booklet construction

Component	Specification
Size	ICAO TD3: 125.0 × 88.0 mm closed booklet.
Pages	32 pages (standard) or 48 pages (frequent traveller), sewn binding with security thread.
Cover	Coated textile or polymer in Covenant Burgundy, the deep red used by Malta, Finland and Portugal; blind-embossed hexagon pattern; gold-foil hot stamping.
Data page	Polycarbonate, laser-engraved; placed as page 2 (hinged) with the chip and antenna inlaid.
Inner pages	Security paper with multitone watermark, UV-dull base, fibres and planchettes; page number perforation.
Endpapers	Front: coat of arms over a guilloche field. Back: map of Aletheia and the Covenant motto in four languages.

D.3 Cover specification

Element	Content and placement
Line 1	THE SOVEREIGN COVENANT STATE — upper third, centred, Manrope SemiBold, letter-spaced.
Line 2	OF ALETHEIA — directly below, Manrope ExtraBold, larger.
Emblem	Coat of arms in single-colour gold foil, about 48 mm tall, centred on the optical centre.
Document name	PASSPORT (large), then REISEPASS · PASOŠ · PASSAPORTO (small) beneath the emblem.
Chip symbol	ICAO electronic passport symbol in gold foil, centred near the bottom edge, at the size ICAO specifies.
Colours	Cover Covenant Burgundy #701824; foil Seal Gold (metallic, matched to #C49A4E).

The reference artwork is Figure 3.4. The printer may adjust spacing to fit the TD3 format and foil tolerances.

D.4 Data page zones

The data page follows the seven zones defined in ICAO Doc 9303 Part 4. The printer places them to the ICAO dimensions; the content of each zone for Aletheia is:

Zone	ICAO purpose	Aletheian content
I	Header	Name of the state and PASSPORT, in English with German, Serbian and Italian beneath; small coat of arms.
II	Personal data	Surname, given names, nationality, date of birth, sex, place of birth (D.5).
III	Document data	Date of issue, date of expiry, issuing authority, document number.
IV	Holder's signature	Digitised signature, or the words for no signature where the holder cannot sign.
V	Identification feature	Primary portrait, laser-engraved in greyscale.

Zone	ICAO purpose	Aletheian content
VI	Optional data	Secondary (ghost) portrait; national identity reference if the Act requires it.
VII	Machine-readable zone	Two lines of 44 characters in OCR-B, generated to ICAO Doc 9303 Part 4.

D.5 Data page fields and labels

Every label is printed in English first, followed by German, Serbian (Latin script) and Italian, separated by a slash. Personalised data is printed in English and Latin characters.

Field	German	Serbian	Italian	Format
Type	Typ	Tip	Tipo	P
Issuing state code	Ausstellungsstaat	Država izdavanja	Stato di rilascio	3 letters, ICAO-assigned
Passport No.	Pass-Nr.	Broj pasoša	Passaporto n.	Up to 9 characters
Surname	Name	Prezime	Cognome	Latin letters; transliteration per Doc 9303
Given names	Vornamen	Ime	Nomi	Latin letters
Nationality	Staatsangehörigkeit	Državljanstvo	Cittadinanza	ALETHEIAN
Date of birth	Geburtsdatum	Datum rođenja	Data di nascita	DD MMM YYYY
Sex	Geschlecht	Pol	Sesso	F, M or X
Place of birth	Geburtsort	Mesto rođenja	Luogo di nascita	Town, country
Date of issue	Ausstellungsdatum	Datum izdavanja	Data di rilascio	DD MMM YYYY
Date of expiry	Gültig bis	Važi do	Scadenza	DD MMM YYYY
Authority	Behörde	Organ izdavanja	Autorità	MINISTRY OF FOREIGN AFFAIRS & JUSTICE
Holder's signature	Unterschrift	Potpis	Firma	Digitised

Month abbreviations in dates use English (JAN, FEB, …). Names containing Serbian or German letters are shown as spelled in the visual zone where the font allows, and transliterated in the machine-readable zone as Doc 9303 requires.

D.6 Portrait requirements

- Full-face, neutral expression, eyes open, plain light background, taken within the last six months.
- Head occupies 70–80% of the portrait height; captured to ISO/IEC 39794-5 quality.
- Primary portrait laser-engraved in greyscale; secondary ghost portrait in Zone VI, and a third image in a transparent window or tactile feature if the printer's substrate allows.
- Captured live at an enrolment station; uploaded photos are not accepted.

D.7 Typography

Use	Typeface	Notes
Cover, headers, labels	Manrope (SemiBold labels, Regular translations)	National typeface; labels 5–6 pt on the data page.
Personalised data (visual zone)	Printer's secure sans-serif personalisation font	High legibility; laser-engraved.
Machine-readable zone	OCR-B, as required by ICAO	Size and spacing strictly per Doc 9303.
Microtext	Manrope or printer's microtext font	Repeating VERITASINFOEDERE, below 0.3 mm.

D.8 Design motifs

Motif	Where it appears
Hexagon lattice	Guilloche background on the data page and inner pages; blind emboss on the cover.
Eight-pointed star of truth	Optically variable device (OVD) on the data page; UV image on visa pages.
Four state charges (tower, book, wheat, ship)	Watermark on inner pages; one charge per spread in the visa-page artwork.
Map of Aletheia	Back endpaper; faint line art across the visa pages.
Motto in four languages	Endpapers and the page footer microtext.

D.9 Security features by inspection level

Level	Who checks	Required features
1 · Naked eye	Border officers, the public	Polycarbonate data page; tactile laser engraving; OVD star of truth; secondary portrait; see-through register of the hexagon; watermark of the state charges.
2 · Simple tools	Trained officers with UV lamp and magnifier	UV-fluorescent coat of arms and fibres; microtext; rainbow (iris) printing in the guilloche; hidden image in the OVD.
3 · Forensic	Laboratory	Taggants in inks and substrate; proprietary features defined by the printer and never published.

D.10 Chip and digital verification

Item	Specification
Chip data	Doc 9303 data groups: DG1 (MRZ data), DG2 (facial image), DG14 and DG15 (security); DG3 fingerprints only if an Act allows it.
Protocols	PACE for access control; Active or Chip Authentication against cloning; Passive Authentication by signature.
PKI	A Country Signing CA run by the Ministry in an HSM; document signer certificates; membership of the ICAO PKD.
StableChain link	The Identity Registry records only the passport's status (valid, reported lost, revoked) and a salted commitment. No names, dates or images are ever written to the ledger.

D.11 Deliverables and approval

Stage	Designer / printer delivers	Aletheia approves
1 · Concept	Two or three design routes for cover, endpapers and visa pages using this brief	Ministry design panel
2 · Security design	Full security artwork, feature list by level, substrate and chip choice	Ministry with the Unified Security Force
3 · Proofs	Printed proofs and specimen booklets marked SPECIMEN, held under strict control	Minister of Foreign Affairs & Justice
4 · Certification	ICAO compliance tests, chip conformity reports, facility certification	Independent test laboratory
5 · Production	Personalisation system, enrolment stations, secure logistics	Cabinet, after recognition

All artwork, proofs and specimens remain the property of the Sovereign Covenant State of Aletheia and are kept under the printer's security controls. No image of a data page, real or specimen, is published.

Veritas in Foedere.
